787 Engine Ice | datacenterdynamics.com
The 787 utilizes an electro-thermal ice protection scheme, in which several heating blankets are bonded to the interior of the protected slat leading edges. The heating blankets may then be energized simultaneously for anti-icing protection or sequentially for deicing protection to heat the wing leading edge.

787 Engine Ice - orrisrestaurant.com

The engine carries composite technology into the fan case. The engine market for the 787 is estimated at US\$40 billion over the next 25 years. A first is the elimination of bleed air systems using high temperature/high pressure air from the propulsion engines to power aircraft systems such as the starting, air-conditioning and anti-ice systems.
