We believe that a cure would mean that people could live entirely free from the condition. But because Parkinson's varies so much from person to person, there may not be a single 'cure'. Instead we may need a range of different therapies that can be used in combination to meet the needs of the individual and their specific form of the condition.

According to the U.S. Census Bureau, the average life expectancy at the beginning of the 20th century was 47.3 years. A century later, that number had increased to 77.85 years, due largely to the development of vaccinations and other treatments for deadly diseases. Of course, vaccines and treatments only work if they're given, which is why many of these diseases still persist in poorer ...
