Solution B gives red colour when a drop of methyl orange is added to it, therefore B is an acid. Hence, solution A will have less concentration of hydrogen ion than B. Thus, A will have pH more than 7 because pH value of an acid solution < 7; a base solution > 7; and a neutral solution = 7. (c) The salts of strong acids and weak bases give acidic solution having pH less than 7. Example, NH<sub>4</sub>Cl, Ammonium Chloride will have pH less than 7.
