MGL Avionics

Guidelines: • A 24 volt landing light drawing 5 Amps is using 5*24 = 120 Watts • A 12 volt radio drawing 3 Amps is using 12*3 = 36 Watts • 1 Watt dissipated in free air is warm to the touch • 10 Watts in free air will burn your fingers. Copyright @ 2004 by Greg Richter greg@bluemountainavionics.com Page 17 of 57.

Aircraft Wiring for Smart People

Unfortunately the installation of radio equipment is not appropriately covered in the appendix. FAA Order 8300.16A Chapter 3 provides guidance as to determining if an alteration is major or minor. In this discussion it will be broken down into a series of questions the installer might answer to arrive at a designation of the alteration as major or minor.

Installation in type-certificated aircraft - VAL Avionics LTD.

You will not be able to get a Form 1 as the MGL is not certified (TSO'd) and is intended for experimental aircraft. If you have very loud engine an external high noise intercom would be best with any radio. The MGL is one piece where the Trig has face and a remote box. They both are 6 watts output, fit into a 2-1/4" space and have 25/8.33Khz spacing.
