General introduction  
One of the definitions  
for a composite  
material, made of two  
constituents, one is  
fiber (the  
reinforcement) and  
the other is glue (the  
matrix), states that a  
combination of the  
two materials would  
result in properties  
better than those of  
the individual

## Composites A

composite material,  
or composite, is made  
of two or more  
materials, often with  
very different  
physical or chemical  
properties, which  
work together to yield  
a material with  
unique characteristics  
not present in the  
individual  
constituents.
