APICS is the leading provider of supply chain, logistics and operations management research, publications, and education and certification programs.

This volume presents the revised and peer reviewed contributions of the "ERP Future 2012" conference held in Salzburg/Austria on November 11th - 12th, 2012. The conference is a platform for research in ERP systems and closely related topics like business processes, business intelligence, and enterprise information systems in general. To master the challenges of ERP comprehensively, the ERP Future 2012 Research conference accepted contributions both with a business focus as well as with an IT focus to consider enterprise resource planning from various viewpoints. This combination of business and IT aspects is a unique characteristic of the conference and of this volume that resulted in valuable contributions with high practical impact.

This book constitutes the refereed proceedings of the 12th IFIP WG 5.5/SOCOLNET Advanced Doctoral Conference on Computing, Electrical and Industrial Systems, DoCEIS 2021, held in Costa de Caparica, Portugal, in July 2021.* The 34 papers presented were carefully reviewed and selected from 92 submissions. The papers present selected results produced in engineering doctoral programs and focus on technological innovation for industry and service systems. Research results and ongoing work are presented, illustrated and discussed in the following areas: collaborative networks; smart manufacturing; cyber-physical systems and digital twins; intelligent decision making; smart energy management; communications and electronics; classification systems; smart healthcare systems; and medical devices. *The conference was held virtually.

Manufacturing Planning and Control Systems for Supply Chain Management is both the classic field handbook for manufacturing professionals in virtually any industry and the standard preparatory text for APICS certification courses. This essential reference has been totally revised and updated to give professionals the knowledge they need.

0This volume addresses on several important topics that influence HRM in the nonprofit sector. By providing rich context and linking research to practice, it creates a foundation for those interested in advancing the art and science of human resources in voluntary organizations.0 ð Gary R. Kirk, Virginia Tech, US This impressive book assembles the latest research findings and thinking on the management of voluntary/nonprofit sector organizations and the effective utilization of both paid staff and volunteers. The authors expertly look into the challenges faced by this sector and the growing role that it plays in society. They review HRM in the voluntary sector and discuss the challenges of bringing about best practices, as well as suggesting how to improve leadership of voluntary/nonprofit organizations. Non-profit organizations serve several useful purposes in society and exist in every country in the world. Like organizations in other sectors, non-profit organizations now have to do more with less. This book indicates the ways in which human resource management policies and practices can improve the effectiveness of non-profit organizations. The authors consider the roles played by non-profit organizations IN effective leadership and its development, developing the non-profit brand, enhancing learning and skills development of both paid staff and volunteers and encouraging and supporting bring about organizational change. They also examine how university-based education programs are developing talent in the non-profit sector. This timely book will prove invaluable to academics and doctoral students interested in all aspects of management within the non-profit/voluntary sector. Government professionals working in this sector will also find this compendium insightful.

Manufacturing Planning & Control for Supply Chain Management, 6e by Jacobs, Berry, and Whybark (formerly Vollmann, Berry, Whybark, Jacobs) is a comprehensive reference covering both basic and advanced concepts and applications for students and practicing professionals. The text provides an understanding of supply chain planning and control techniques with topics including purchasing, manufacturing, warehouse, and logistics systems. Manufacturing Planning & Control for Supply Chain Management, 6e continues to be organized in a flexible format, with the basic coverage in chapters 1-8 followed.

When work began on the first volume ofthis text in 1992, the science of dis tribution management was still very much a backwater of general manage ment and academic thought. While most of the body of knowledge associated with calculating EOQs, fair-shares inventory deployment, productivity curves, and other operations management techniques had long been solidly established, new thinking about distribution management had taken a definite back-seat to the then dominant interest in Lean thinking, quality management, and business process reengineering and their impact on manufacturing and service organizations. For the most part, discussion relating to the distri bution function centered on a fairly recent concept called Logistics Manage ment. But, despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of com petitve advantage on its own, most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day-to-day shipping and receiving functions in order to achieve cost contain ment and customer fulfillment objectives. In the end, distribution manage ment was, for the most part, still considered a dreary science, concerned with oftransportation rates and cost trade-offs. expediting and the tedious calculus Today, the science of distribution has become perhaps one of the most im portant and exciting disciplines in the management of business.
