This book empowers readers to know the thought-provoking filed of software effort estimation. It discusses how requirement change effort estimation using algorithmic and impact analysis techniques is used to optimize the estimation accuracy prediction of software development effort. It is a worthy read for researchers and practitioners to estimate the change effort required to develop traditional and agile-based software systems.

Information--regular, systematic, reliable--is the life-blood of democracy and the fuel of effective management. Surely today there is no problem with information, for this is the age of information overload. It pours onto our computer screens and out of our printers. Indeed, many governments claim, often with some justification, to be more open and transparent than ever before. But what if the life-blood is contaminated, or the fuel polluted? Then the body politic sickens and the engine of public management runs rough. It is the vital issue of the quality of the information we receive that this book addresses. Quality Matters compares approaches across different jurisdictional settings and across three different types of information evaluation. The chapters describe and analyze quality assurance in a number of countries and within a variety of international organizations. These have been selected either because they are widely considered to be leaders in evaluating information or because they have experience with assuring quality information that can instruct others. Contributors are from Australia, Canada, the European Union, France, the Netherlands, New Zealand, Sweden, Switzerland, United Kingdom, United States, and the World Bank. This pioneering study analyzes practices for assuring the quality of evaluation, performance auditing, and reporting in the face of political, organizational, and technical obstacles. A final chapter addresses the extent to which quality assurance systems become bothersome rituals or remain meaningful mechanisms to ensure quality control. This well-structured volume will be of particular interest to policymakers and adds much to the literature on program evaluation and performance auditing.

Banking and financial services organizations are one of the largest consumers of information technology, deploying large IT workforce worldwide. Banks have a complex landscape of technology and applications catering to their diverse information needs. It is important for the people working in banks and associated with technology field to have an optimum understanding of the overall IT landscape. This will help them appreciate the scope of their work in the overall context, as well as understand the criticality of various system interfaces. This book provides an overview of the complex banking technology landscape in a simple and easy-to-understand format. KEY FEATURES — Technology landscape is explained in a simple and generic way so that readers may relate it to their diverse information needs — Several technology concepts like Service Oriented Architecture (SOA), Master Data Management (MDM), Customer Relationship Management (CRM), Business Process Management (BPM), Web Content Management Systems (WCM), Document Management Systems (DMS) etc. have been explained with simple examples in the context of banking systems — Information presented is more for education and knowledge purposes instead of recommending any target architecture or product SURESH SAMUDRALA has been working in the IT industry for the last 20 years after completing his Post Graduation in Computer Science from IIT Madras. He has worked for various banking and financial institutions across the globe. His professional areas of interest include delivery management, enterprise architecture and innovation.
