In the European Union (EU), competition policy occupies a central place amongst other EU public policies and is the first truly supranational public policy regulating market competition. One of the stated objectives of EU competition policy is to prevent excessive concentration of economic power in the hands of a few. This book investigates the political economy of EU competition policy by taking the European telecommunications industry as a case study. Baskoy argues that the EU competition policy has failed to achieve its objectives of preventing excessive market concentration in the telecommunications industry over the past quarter-century. He takes the controversial view that EU competition policy foremost promotes an industrial policy that fosters the profitability of European firms. Moreover, Baskoy argues that EU competition policy is short of adequate theoretical and conceptual capacities to comprehend the working dynamics of market competition and the market behavior of firms. This exceptional book will be of interest to scholars of Politics, Economics, Business, and International Relations and Policies.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exonerated. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The Open Access version of this book, available at <http://www.tandtebooks.com/>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license. There has been an enormous increase in interest in the use of evidence for public policymaking, but the vast majority of work on the subject has failed to engage with the political nature of decision making and how this influences the ways in which evidence will be used (or misused) within political areas. This book provides new insights into the nature of political bias with regards to evidence and critically considers what an ‘improved’ use of evidence would look like from a policymaking perspective. Part I describes the great potential for evidence to help achieve social goals, as well as the challenges raised by the political nature of policymaking. It explores the concern of evidence advocates that political interests drive the misuse or manipulation of evidence, as well as counter-concerns of critical policy scholars about how appeals to “evidence-based policy” can depoliticise political debates. Both concerns reflect forms of bias – the first representing technical bias, whereby evidence use violates principles of scientific best practice, and the second representing issue bias in how appeals to evidence can shift political debates to particular questions or marginalise policy-relevant social concerns. Part II then draws on the fields of policy studies and cognitive psychology to understand the origins and mechanisms of both forms of bias in relation to political interests and values. It illustrates how such biases are not only common, but can be much more predictable once we recognise their origins and manifestations in policy arenas. Finally, Part III discusses ways to move forward for those seeking to improve the use of evidence in public policymaking. It explores what constitutes ‘good evidence for policy’, as well as the ‘good use of evidence’ within policy processes, and considers how to build evidence-advisory institutions that embed key principles of both scientific good practice and democratic representation. Taken as a whole, the approach promoted is termed the ‘good governance of evidence’ – a concept that represents the use of rigorous, systematic and technically valid pieces of evidence within decision-making processes that are representative of, and accountable to, populations served.

A trillion-dollar industry, the US non-profit sector is one of the world's largest economies. From art museums and university hospitals to think tanks and church charities, over 1.5 million organizations of staggering diversity share the tax-exempt 501(c)(3) designation, if little else. Many social justice organizations have joined this world, often blunting political goals to satisfy government and foundation mandates. But even as funding shrinks, many activists often find it difficult to imagine movement-building outside the non-profit model. The Revolution Will Not Be Funded gathers essays by radical activists, educators, and non-profit staff from around the globe who critically rethink the long-term consequences of what they call the “non-profit industrial complex.” Drawing on their own experiences, the contributors track the history of non-profits and provide strategies to transform and work outside them. Urgent and visionary, The Revolution Will Not Be Funded presents a biting critique of the quietly devastating role the non-profit industrial complex plays in managing dissent. Contributors: Christine E. Ahn, Robert L. Allen, Alisa Bierria, Nicole Burrows, Communities Against Rape and Abuse (CARA), William Cordery, Morgan Cousins, Ruth Wilson Gilmore, Stephanie Guilloud, Adjoa Florência Jones de Almeida, Tiffany Lethabo King, Paul Kivel, Soniya Munshi, Ewuaré Osayande, Amara H. Pérez, Project South: Institute for the Elimination of Poverty and Genocide, Dylan Rodriguez, Paula X. Rojas, Ana Clarissa Rojas Durazo, Sisters in Action for Power, Andrea Smith, Eric Tang, Madonna Thunder Hawk, Ije Ude, Craig Willse

This first textbook on the topic of gentrification is written for upper-level undergraduates in geography, sociology, and planning. The gentrification of urban areas has accelerated across the globe to become a central engine of urban development, and it is a topic that has attracted a great deal of interest in both academia and the popular press. Gentrification presents major theoretical ideas and concepts with case studies, and summaries of the ideas in the book as well as offering ideas for future research.

The novel coronavirus SARS-CoV-2, which causes the disease known as COVID-19, has infected people in 212 countries so far and on every continent except Antarctica. Vast changes to our home lives, social interactions, government functioning and relations between countries have swept the world in a few months and are difficult to hold in one’s mind at one time. That is why a collaborative effort such as this edited, multidisciplinary collection is needed. This book confronts the vulnerabilities and interconnectedness made visible by the pandemic and its consequences, along with the legal, ethical and policy responses. These include vulnerabilities for people who have been harmed or will be harmed by the virus directly and those harmed by measures taken to slow its relentless march; vulnerabilities exposed in our institutions, governance and legal structures; and vulnerabilities in other countries and at the global level where persistent injustices harm us all. Hopefully, COVID-19 will force us to deeply reflect on how we govern and our policy priorities; to focus preparedness, precaution, and recovery to include all, not just some. Published in English with some chapters in French.

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

The notion of 'resilience' is gaining currency in European and transatlantic security policy discussions. The EU and NATO are each building the capacity of their member states to anticipate, preempt and resolve disruptive challenges to vital societal functions. The EU and NATO are also exploring ways to work more effectively together in this area. But is resilience enough to deal with disruptive threats in a deeply interconnected world? In this new study, authors and experts argue that while state-by-state approaches to resilience are important, they are likely to be insufficient in a world where few critical infrastructures are limited to national borders, and where robust resilience efforts by one country may mean little if its neighbor's systems are weak. They argue not only that resilience must be shared, it must be projected forward, and that traditional notions of territorial security must be supplemented with actions to address flow security – protecting critical links that bind societies to one another.
