This book provides a short and concise overview of the vastly complex history of the origins of cinema. From the very first zoetropes and magic lanterns, to the first motion capture film cameras. Covering the key individuals involved in the creation of cinema, such as, Albertus Magnus, Eadweard Muybridge, Louis Le Prince and the Lumiere Brothers. Any film fan or anyone with an interest in the history of cinema should find this book both interesting and useful.

Revealing the mechanics of evolutionary theory, the scientist, engineer and inventor presents a compelling argument for the scientific unviability of creationism and insists that creationism's place in the science classroom is harmful not only to our children, but to the future of the greater world as well.

New York Times bestselling authors Bill Nye the Science Guy and Gregory Mone take middle-grade readers on a scientific adventure in the launch of an exciting new chapter book series, Jack and the Geniuses. The perfect combination to engage and entertain readers, the series features real-world science along with action and a mystery that will leave kids guessing until the end, making these books ideal for STEM education. In the series opener, Jack and the Geniuses: At The Bottom of The World, readers meet Jack and his foster siblings, Ava and Matt, who are orphans. But they're not your typical kind of orphans—they're geniuses. Well, Ava and Matt are, which sometimes makes life difficult for twelve-year-old Jack. Ava speaks multiple languages and

builds robots for fun, and Matt is into astronomy and a whiz at math. As for Jack, it's hard to stand out when he's surrounded by geniuses all the time. When the kids try to spy on Dr. Hank Witherspoon, one of the world's leading scientists, they end up working for him in his incredible laboratory. Soon, Hank and the kids travel to Antarctica for a prestigious science competition, but they find that all is not as it seems: A fellow scientist has gone missing, and so has any trace of her research. Could someone be trying to use her findings to win the contest? It's up to Jack, Ava, and Matt to find the missing scientist and discover who's behind it all—before it's too late. Integrating real science facts with humor and suspense, and featuring an ensemble cast of loveable boy and girl characters, this uniquely engaging series is an irresistible chemical reaction for middle-grade readers. With easy-to-read language presented in a fun, motivating, and accessible way, this series opener is a great book for both inquisitive kids and reluctant readers. The book also includes information about the science discussed and used to solve the mystery, as well as a cool science project about density that kids can do at home or in the classroom. Bill Nye's brand new talk show series for Netflix, "Bill Nye Saves the World" is set to launch in Spring 2017.

Presents basic concepts in physics, covering topics such as kinematics, Newton's laws of motion, gravitation, fluids, sound, heat, thermodynamics, magnetism, nuclear physics, and more, examples, practice questions and problems.

An acclaimed nature writer describes and illustrates common and rare spiders from near and far, from the familiar garden spider to tarantulas, funnel weavers, and the unusual bolas spider.

The activities in this book have two intentions: to teach concepts related to earth and space science and to provide students the opportunity to apply necessary skills needed for mastery of science and technology curriculum objectives. Throughout the experiments, the scientific method is used. In each section you will find teacher notes designed to provide guidance with the learning intention, the success criteria, materials needed, a lesson outline, as well as provide insight on what results to expect when the experiments are conducted. Suggestions for differentiation are also included so that all students can be successful in the learning environment. Topics covered include: Heat in the Environment, Energy Sustainability and Stewardship Systems and Interactions. 96 Pages

Do you ever feel sick of your job? Do you ever envy those people who seem to positively love what they do? While those people head off to work with a sense of joy and purpose, for the rest of us trudging back to the office on Monday morning or to the factory for the graveyard shift or to the job site on a hundred-degree day can be an exercise in soul crushing desperation. "If only we could change jobs," we tell ourselves, "that would make it better." But we don't have the right education . . . or we don't have enough experience . . . or the economy isn't right . . . or we can't afford the risk right now. So we keep going back to the same old unsatisfying jobs. The wonderful truth, though, is that almost any kind of occupation can offer any one of us a sense of calling. Regardless of where we are in our careers, we can all find joy and meaning in the work we do, from the construction zone flagger who keeps his crew safe to the corporate executive who believes that her company's products will change the world. In *Make Your Job a Calling* authors Bryan J. Dik and Ryan D. Duffy explore this powerful idea and help the reader navigate the many challenges—both internal and external—that may arise along the pathway to a sense of calling at work. Over the course of four sections, the authors define the idea of calling, review cutting-edge research on the subject, provide practical guidelines for discerning a calling at all stages of work and life, and explore what calling will look like as workplace norms continue to evolve. They also take pains to present a realistic view of the subject by unpacking the perils and challenges of pursuing one's higher purpose, especially in an uncertain economy. The lessons presented will resound with anyone in any line of work and will show how the power of calling can beneficially shape individuals, organizations, and society as a whole.
