Close-quarters combat (CQC) or close-quarters battle (CQB) is a tactical concept that involves a physical confrontation between several combatants at very short range. It can take place between military units, police/corrections officers and criminals, and in other similar scenarios. In warfare, it usually consists of small units or teams engaging the enemy with personal weapons

Mass-action expression (reaction quotient or concentration fraction) is given the symbol Q . For a given reversible reaction: $a A + b B \rightleftharpoons c C + d D$. the mass-action expression (Q) is defined as. $Q = \frac{[C]^c [D]^d}{[A]^a [B]^b}$. where the square brackets, $[\]$, refer to the concentration of that species in a certain phase.

The action of the modular group on the rational numbers can most easily be understood by envisioning a square grid, with grid point (p, q) corresponding to the fraction p / q (see Euclid's orchard). An irreducible fraction is one that is visible from the origin; the action of the modular group on a fraction never takes a visible (irreducible) to a hidden (reducible) one, and vice versa.

Coenzyme Q, also known as ubiquinone, is a
coenzyme family that is ubiquitous in animals
and most bacteria (hence the name
ubiquinone). In humans, the most common form
is Coenzyme Q 10 or ubiquinone-10. CoQ 10 is
not approved by the U.S. Food and Drug
Administration (FDA) for the treatment of any
medical condition; however, it is sold as a
dietary supplement and is an ingredient in
some cosmetics.

The chug-chug-chug of the electric motor and piston system is bizarre in sound and feel when you are used to a gas operated pistol - rate of single shot fire seems slow because of the laboured because of the clunky action and it seems somehow slower to respond than a GBB when the trigger is pulled.
