Chapter 10 - Molecular Biology of the Gene A. Bacterial Transformation Researchers found that they could transfer an inherited characteristic (e.g. the ability to cause pneumonia), from one strain of bacteria to another, by exposing a harmless bacteria strain to DNA extracted from a disease causing strain This process of transferring an inherited trait by an extract of DNA is called transformation B. Bacterial Invaders Definitive proof of the gene-DNA connection came from work with

## Chapter 10 Molecular Biology of the Gene

A cell containing a single chromosome is placed in a medium containing radioactive phosphate so that any new DNA strands formed by DNA replication will be radioactive. The cell replicates its DNA and divides. Then the daughter cells (still in the radioactive medium) replicate their DNA and divide, and a total of four cells are present.
