Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

This book outlines the important foundational insights for enterprise governance and enterprise engineering, which are obviously provided by the social and organization sciences, but also by other sciences such as philosophy and information technology. It presents an employee-centric theory of organization in order to secure enterprise performance and also to comply with moral considerations about society and human individuals. This is necessary as prescriptions based on 'best practices' or the 'best managed companies' are often merely anecdotal, faddish, or controversial, and based on unsubstantiated pseudo-theories. The book consists of four main chapters, the first of which summarizes the importance of foundational insights for enterprises and explains the mutual relationships between the basic elements of enterprise governance and enterprise engineering. Next, chapter 2 explains the necessary philosophical foundations concerning knowledge, truth, language, and human existence. Subsequently, chapter 3 describes the ontological foundation and the nature of society and enterprises, as understanding their characteristics is a prerequisite for understanding and designing enterprises. Finally, chapter 4 approaches ideological foundations as beliefs and convictions, as they create specific requirements for the design of enterprises. In this way, the book covers all the cornerstones of the employee-centric theory of organization, drawing on foundational insights. The book is mainly intended for students specializing in areas such as business administration, management and organization science, governance, and enterprise and information systems design. However, professionals working in these areas will also benefit from the book, as it allows them to gain a deeper understanding of the theoretical foundations of their work and will thus help them to avoid strategic failures due to a lack of coherence and consistency between the various parts of their organization.
