This book, written by a philosopher interested in the problems of social science and scientific method, and a sociologist interested in the philosophy of science, presents a novel conception of how we should think about and carry out the scientific study of social life. This book combines an evaluation of different conceptions of the nature of science with an examination of important sociological theorists and frameworks. This second edition of the work was originally published in 1982.

Almost 117 million passengers flew on Europe's low cost airlines in 2006. This statistic would have seemed beyond belief in the mid-1980s when air transport was a heavily regulated sphere. This book examines the deregulation which has taken place since then and in particular looks at the single most important repercussion of the deregulation of Europe's skies - the rise of the low cost airline. Sean Barret has been involved in the debates surrounding this right from the start and is well placed to provide a scholarly study of the issue. The book spends much time looking at the success of Ryanair in this period - this provides the perfect case study given the dominant role that the company has taken up over recent years.

Technologies which can meet the environmental challenges of the pulp and paper industry and also discusses Mills and Fiberlines that encompass “State-of-the-Art” technology and management practices. The minimum impact mill does not mean "zero effluent", nor is it exclusive to one bleaching concept. It is a much bigger concept which means that significant progress must be made in the following areas: Water Management, Internal Chemical Management, Energy Management, Control and Discharge of Non-Process Elements and Removal of Hazardous Pollutants. At the moment, there is no bleached kraft pulp mill operating with zero effluent. With the rise in environmental awareness due to the lobbying by environmental organizations and with increased government regulation there is now a trend towards sustainability in the pulp and paper industry. Sustainable

pulp and paper manufacturing requires a holistic view of the manufacturing process. During the last decade, there have been revolutionary technical developments in pulping, bleaching and chemical recovery technology. These developments have made it possible to further reduce loads in effluents and airborne emissions. Thus, there has been a strong progress towards minimum impact mills in the pulp and paper industry. The minimum-impact mill is a holistic manufacturing concept that encompasses environmental management systems, compliance with environmental laws and regulations and manufacturing technologies.
