First book on rubber used as a construction material dedicated to the chemical process industry Despite the long history of rubber as a construction material, this book is a unique publication as it comprehensively looks at the material with respect to the anti-corrosion requirements of the multitude of industries where rubber is used, both on land and offshore. This guide documents how rubber reliably meets the threats of

corrosion and contributes to the longevity of the equipment. Chapters on ebonite, natural, and synthetic rubbers, examine their relevant properties and chemical resistance. The book details the practical aspects and handling of rubber lined equipment: thin-walled structures, vacuum vessels, ducts, large diameter tanks, agitators, and fully lined pipes (both inside and outside). Molded and fabricated products of ebonite and soft rubber as well as hand-made rubber products are shown along with vulcanization technology, testing and inspections, measurements and standards. Several case

studies are included demonstrating the preferential choice of rubber as a construction material as well as practical applications and techniques of its usage in the chlor-alkali, fertilizer, mineral processing and other core chemical processing industries, which are the largest consumers of rubber as a material of construction. The volume ends with a section on aging and prediction of service life. Rubber as a Construction Material for Corrosion Protection will be used by chemical engineers, rubber technologists, students, research workers worldwide in the rubber

industry and process industries such as fertilizer, mining and ore, oil & gas, paper and pulp, steel plants, as well as people engaged in corrosion protection. The book will also be very useful to the construction industry.

Anticorrosive Rubber Lining discusses the state-of-the-art in this evolving industry, including sections on the best materials and formulations to use, what's best for a particular application, which repair technique is best for a given application, how long a rubber lining is likely to last,

vulcanization parameters, and more. This book deals with the important field of anticorrosive rubber lining and its applications in various industries, including oil and gas, nuclear, aerospace, maritime, and many more, highlighting many of the technological aspects involved. The author offers a unique perspective due to the exclusiveness of the case histories presented, including many industrial rubber lining practices which are mostly kept within the industry. The technical information on rubber presented here is a practical tool to enable engineers to make the best use of

rubber linings to prevent corrosion in chemical plants. The book includes valuable insights into bonding systems, surface preparation, and coating methodologies, and also covers failure analysis of failed systems. Includes up-to-date technical information on special compounding and processing technology of recently developed synthetic rubbers Provides detailed case studies from industry sectors, including aerospace, nuclear energy, and mining Presents rare, valuable insider knowledge of current industry practice

Instead of using expensive alloys to construct a tank or processing vessel, it is often more economical to use a less expensive metal, such as carbon steel, and install a lining to provide protection from corrosion. Corrosion of Linings and Coatings: Cathodic and Inhibitor Protection and Corrosion Monitoring offers focused coverage for professionals interested in protective linings and coatings, corrosion protection, and monitoring techniques. The author details various materials and methods for controlling and protecting against corrosion. He discusses the use of mortars, grouts, and

monolithic surfaces and explains how the use of inhibitors and cathodic protection help prevent corrosion. The book also provides details for various types of linings materials and coatings and includes valuable compatibility charts for each material covered. The author concludes with an explanation of a variety of corrosion monitoring techniques currently available.

This book covers a variety of specific coatings and solid sheet and liquid applied linings, focusing on surface preparation, installation, and applicaton and detailing

physical, mechanical, and overall corrosion resistance. It compares and contrasts individual linings and coatings including glass, cement, various paints for concrete, and metallic and polymer-based coatings. Then it examines the effects of temperature extremes such as coalescence, sagging and slumping, leveling, and adhesion. The book includes an analysis of organic, metallic, and monolithic coatings and paints for concrete and assesses polyester, acrylic, and urethane coatings that offer atmospheric protection.

research time: Get fast answers about the best material for a particular application. In the past, researching the endless sources on corrosion and materials in their countless applications were next to impossible. That's why this book was written: to help simplify your materials selection problems. It's an exhaustive source on the different corrosion-resistant materials, types of corrosion, factors affecting corrosion, passivation, corrosion monitoring, corrosion control measures, methodology of materials selection, and more.

Continuing to provide excellent, state-of-the-art information on corrosion and practical solutions for reducing corrosion, the Second Edition contains valuable suggestions on how to select the best construction material for a specific application . . . choose an appropriate initial design to avoid inherent corrosion pitfalls . . . determine what corrosion problems may exist or develop, as well as the possible extent of the problems. . . and establish practices to monitor corrosion of existing equipment. In addition to significantly revising and expanding all

chapters to reflect recent progress in the field, such as the development of materials for pollution control and methods of controlling/preventing corrosion, Corrosion and Corrosion Protection Handbook, Second Edition features detailed discussions on such new topics as atmospheric corrosion, designing to prevent corrosion, sheet linings, and corrosion inhibitors.

This work presents a step-by-step procedure for determining the most suitable piping material for any given situation. It describes all corrosion-resistant piping

systems - including thermoset and thermoplastic, lined and metallic systems and miscellaneous systems such as glass, carbon and clay. A compatibility table for each piping system, compiling the corrosion resistance of over 175 common corrodents, is provided.

Rubber linings can be used as passive protection against the corrosion of plant and equipment in the chemical process industries. Rubbers act as sacrificial materials reacting or un-reacting with the corrosive media, diffusing the liquids or not diffusing,

swelling by itself or not swelling, permeating or not permeating gases or fumes, abrading or wearing by the slurry particles, getting ozonised or oxidised; but still protecting the metal surface beneath it, during its considerable life cycle under those severe and stressed conditions. Rubbers age but their life cycle is good enough to protect the metals against corrosion and erosion. The raw material bases are natural or synthetic rubbers. Rubber is used for corrosion/abrasion proof linings, more than any other material because of its proven superiority in this service at a relatively

low cost. Fertilizer, electroplating, ore-refining, petrochemicals, chlor-alkali and paper industries invariably turn to rubber linings, in preference to other types of linings for their high resistance to corrosion and abrasion. Moreover the variety of rubbers, both natural and man-made, available and its flexibility to serve under wide temperature and pressure ranges, made rubber linings as the world-wide accepted anti-corrosive and anti-abrasive media. This book describes exactly how to use rubber as a lining in tanks and how to overcome problems associated with this technique.
