Critical Perspectives in Food Studies 2nd edition ...

About the Series. The study of food has seldom been more pressing or prescient. From the intensifying globalization of food, a world-wide food crisis and the continuing inequalities of its production and consumption, to food's exploding media presence, and its growing re-connections to places and people through 'alternative food movements', this series promotes critical explorations of contemporary food cultures and politics.

The market-leading interdisciplinary exploration of food and its essential place in our society by Canadian and international scholars. Critical Perspectives in Food Studies is a compelling examination of the shifting interpretations, perspectives, challenges, governance issues, and future visions that shape the study of food and food issues in Canada and around the world. With new chapters on a diverse range of current food-related issues, this third edition continues to bring students original contributions by Canadian scholars that will inspire readers to consider the varied and complex means by which we bring food to the table.

"Bringing together original contributions by Canadian scholars from various disciplinary backgrounds, Critical Perspectives in Food Studies introduces students to the shifting interpretations, perspectives, challenges, governance issues, and future visions that shape the study of food and food issues in Canada and around the world. Offering the most up-to-date overview of the field, this second edition incorporates new chapters on a range of current food-related issues, including food security, farm animal welfare, genetically modified crops, sustainability, and alternative food systems."--

Edited by leading scholars in the field of food studies, *Critical Perspectives in Food Studies* brings together original contributions by Canadian scholars who skillfully showcase the diversity and extent of the field. Organized around five sections, this book examines the network of social relations, processes, structures, and institutional arrangements that affect human interactions with nature and food.

Sheds light on the history of food, cooking, and eating. This collection of essays investigates the connections between food studies and women's studies. From women in colonial India to Armenian American feminists, these essays show how food has served as a means to assert independence and personal identity.

Obesity is a global public health problem of crucial importance. Obesity rates remain high in high-income countries and are rapidly increasing in low- and middle- income countries. Concurrently, the global consumption of unhealthy products, such as soft drinks and processed foods, continues to rise. The ongoing expansion of multinational food and beverage companies, or 'Big Food', is a key factor behind these trends. This collection provides critical insight into the global expansion of 'Big Food', including its incursion into low-and-middle income countries. It examines the changing dynamics of the global food supply, and discusses how low-income countries can alter the 'Big Food'-diet from the bottom-up. It examines a number of issues related to 'Big Food' marketing strategies, including the way in which they advertise to youths and the rural poor. These issues are discussed in terms of their public health implications, and their relation to public health activities, for example 'soda taxes', and the promotion of nutritionally-healthier products. This book was originally published as a special issue of *Critical Public Health*.

This expansive collection enriches the field of food studies with a feminist intersectional perspective, addressing the impacts that race, ethnicity, class, and nationality have on nutritional customs, habits, and perspectives. Throughout the text, international scholars explore three areas in feminist food studies: the socio-cultural, the corporeal, and the material. The textbook's chapters intersect as they examine how food is linked to hegemony, identity, and tradition, while contributors offer diverse perspectives that stem from biology, museum studies, economics, popular culture, and history. This text's engaging writing style and timely subject-matter encourage student discussions and forward-looking analyses on the advancement of food studies. With a unique multidisciplinary and global perspective, this vital resource is well-suited to undergraduate students of food studies, nutrition, gender studies, sociology, and anthropology.

This book examines the ethics, politics and aesthetics of veganism in contemporary culture and thought. Traditionally a lifestyle located on the margins of western culture, veganism has now been propelled into the mainstream, and as agribusiness grows animal issues are inextricably linked to environmental impact as well as to existing ethical concerns. This collection connects veganism to a range of topics including gender, sexuality, race, the law and popular culture. It explores how something as basic as one's food choices continue to impact on the cultural, political, and philosophical discourse of the modern day, and asks whether the normalization of veganism strengthens or detracts from the radical impetus of its politics. With a Foreword by Melanie Joy and Jens Tuidor, this book analyzes the mounting prevalence of veganism as it appears in different cultural shifts and asks how veganism might be rethought and re-practised in the twenty-first century.

This volume is a pioneering contribution to the study of food politics and critical agrarian studies, where food sovereignty has emerged as a pivotal concept over the past few decades, with a wide variety of social movements, on-the-ground experiments, and policy innovations flying under its broad banner. Despite its large and growing popularity, the history, theoretical foundations, and political program of food sovereignty have only occasionally received in-depth analysis and critical scrutiny. This collection brings together both longstanding scholars in critical agrarian studies, such as Philip McMichael, Bina Agarwal, Henry Bernstein, Jan Douwe van der Ploeg, and Marc Edelman, as well as a dynamic roster of early- and mid-career researchers. The ultimate aim is to advance this important frontier of research and organizing, and put food sovereignty on stronger footing as a mobilizing frame, a policy objective, and a plan of action for the human future. This volume was published as part one of the special double issue celebrating the 40th anniversary of the *Journal of Peasant Studies*.

School Food, Equity and Social Justice provides contemporary, critical examinations of policies and practices relating to food in schools across 25 countries from an equity and social justice perspective. The book is divided into three sections: Food politics and policies; Sustainability and development; and, Teaching and learning about food. Bringing together an interdisciplinary group of academics with practitioner backgrounds, the chapters in this collection broaden discussions on school food to consider its educational and environmental implications, the ideals of food in schools, the emotional and ideological components of schooling food, and the relationships with home and everyday life. Our aim is to provide enhanced insight into matters of social justice in diverse contexts, and visions of how greater equality and equity may be achieved through school food policy and in school food programs. We expect this book to become essential reading for students, researchers and policy makers in health education, health promotion, educational practice and policy, public health, nutrition and social justice education.

Health, Food and Social Inequality investigates how vast amounts of consumer data are used by the food industry to enable the social ranking of products, food outlets and consumers themselves, and how this influences food consumption patterns. This book supplies a fresh social scientific perspective on the health consequences of poor diet. Shifting the focus from individual behaviour to the food supply and the way it is developed and marketed, it discusses what is known about the shaping of food behaviours by both social theory and psychology. Exploring how knowledge of social identities and health beliefs and behaviours are used by the food industry, Health, Food and Social Inequality outlines, for example, how commercial marketing firms supply food companies with information on where to locate snack and fast foods whilst also advising governments on where to site health services for those consuming such foods disproportionately. Giving a sociological underpinning to Nudge theory while simultaneously critiquing it in the context of diet and health, this book explores how social class is an often overlooked factor mediating both individual dietary practice and food marketing strategies. This innovative volume provides a detailed critique of marketing and food industry practices and places class at the centre of diet and health. It is suitable for scholars in the social sciences, public health and marketing.
