Deep Learning For Event Driven Stock Prediction

When somebody should go to the ebook stores, search opening by shop, shelf by shelf, it is really problematic. This is why we give the books compilations in this website. It will enormously ease you to see guide **deep learning for event driven stock prediction** as you such as.

By searching the title, publisher, or authors of guide you in fact want, you can discover them rapidly. In the house, workplace, or

Stock Prediction for Event-Driven Multi-Agent Decision Processes.

Abstract: The incorporation of macro-actions (temporally extended actions) into multi-agent decision problems has the potential to address the curse of dimensionality associated with such decision problems. Since macro-actions last for stochastic durations, multiple agents executing decentralized policies in cooperative environments must act asynchronously.

suitable venues for hosting events, which can attract a great turnout, is a key challenge. In this paper, we present a deep learning based venue recommendation system `$DeepVenue$` which provides context driven venue recommendations for the Meetup event-hosts to host their events. The crux of the proposed model relies on the notion of similarity between multiple Meetup entities such as events, venues, groups, etc.

Event-Driven Market Prediction with Deep Learning

Deep learning is a series of models that have the ability to extract deep features from input data with deep neural network architecture. Deep learning models usually have more than three layers. The deep network is typically initialized by unsupervised layer-wise training and then tuned by supervised training with labels that can progressively generate more abstract and high-level features layer by layer [56] .
