Forty years of collaboration in research and writing with Roger G. Barker have uniquely qualified the author to revise Barker's classic Ecological Psychology: Concepts and Methods for Studying the Environment of Human Behavior (1968). The author's primary goal has been to provide an up-to-date and comprehensive description of behavior setting theory and method with sufficient detail and illustration to guide new research applications. Barker's presentation of theory and method has been preserved except where changes were required to reflect the advances reported in Barker and Schoggen's Qualities of Community Life (1973). The lengthy report in Ecological Psychology of empirical findings from the study of behavior settings the town of Midwest has been replaced by extensive summaries of the currently available reports of research applications of behavior setting theory. Four new chapters have been added: a chapter by economist Karl A. Fox on the use of behavior settings in social system accounting, an article by Barker on behavior settings that have figured prominently in his career, a chapter that discusses behavior settings in relation to a number of other concepts in social science and the field of environment and behavior, and a final chapter on the need for an eco-behavioral science taken from two papers by Barker.

An international team of leading scholars explores the latest theories, research, and applications critical to environmental psychology Featuring the latest research and concepts in the field straight from the world's leading scholars and practitioners, Handbook of Environmental Psychology provides a balanced and comprehensive overview of this rapidly growing field. Bringing together contributions from an international team of top researchers representing a myriad of disciplines, this groundbreaking resource provides you with a pluralistic approach to the field as an interdisciplinary effort with links to other disciplines. Addressing a variety of issues and practice settings, Handbook of Environmental Psychology is divided into five organized and accessible parts to provide a thorough overview of the theories, research, and applications at the forefront of environmental psychology today. Part I deals with sharpening theories; Part II links the subject to other disciplines; Part III focuses on methods; Part IV highlights applications; and Part V examines the future of the field. Defining the ongoing revolution in thinking about how the environment and psychology interact, Handbook of Environmental Psychology is must reading for anyone coping directly with the attitudes, beliefs, and behaviors that are destroying our environment and putting our lives in jeopardy. Topics include: \* Healthy design \* Restorative environments \* Links to urban planning \* Contaminated environments \* Women's issues \* Environments for aging \* Climate, weather, and crime \* The history and future of disaster research \* Children's environments \* Personal space in a digital age \* Community planning

Environmental Psychology and Human Well-Being: Effects of Built and Natural Settings provides a better understanding of the way in which mental and physical well-being is affected by physical environments, along with insights into how the design of these environments might be improved to support better health outcomes. The book reviews the history of the field, discusses theoretical constructs in guiding research and design, and provides an up-to-date survey of research findings. Core psychological constructs, such as personal space, territoriality, privacy, resilience, stress, and more are integrated into each environment covered. Provides research-based insight into how an environment can impact mental and physical health and well-being Integrates core psychological constructs, such as coping, place attachment, social support, and perceived control into each environment discussed Includes discussion of Kaplan's Attention Restoration Theory and Ulrich's Stress Reduction Theory Covers educational settings, workplace settings, environments for active living, housing for the elderly, natural settings, correctional facilities, and more

This textbook provides a clear and comprehensive introduction to the rapidly expanding field of environmental psychology. The authors start with a review of the history of environmental psychology, highlighting its interdisciplinary nature. They trace its roots in architecture, ecology and geography, and examine the continuing relationship of these subjects to the psychological tradition. The book then moves through key contemporary lines of research in the field, contrasting models from perception and cognition, such as those of Gibson and Brunswick, with major social psychological approaches as represented by Lewin, Barker and others. The book concludes with an analysis of the most promising areas of research and practice
