Services industries account for almost three-quarters of both gross domestic product and employment in Canada, a trend that Canada shares with other G-7 countries. Furthermore, the services sector has been responsible for most of Canada's employment creation and much of its productivity growth over the past decade and the sector's importance to the Canadian economy continues to increase. Thirty renowned experts contribute to this volume, which is aimed at better understanding the dynamics of Canadian services industries and identifying the types of policies most likely to improve their innovation and productivity performance.

This comprehensive Handbook provides an in-depth analysis of the nature of East Asian economic integration alongside thoughtful insights into contemporary issues, such as agricultural development, structural transformation and East Asian trade, alongside skills and human capital development policies of ASEAN. This study examines the proposal of the United States, and supported by Canada and the EC, that the trading nations should negotiate new international, multilateral rules to control restrictions on trade in services, including services provided by establishments, such as branches or subsidiaries of foreign controlled firms, as well as services sold across frontiers, such as computer services.

At the very heart of modern healthcare is a critical paradox. Today, as never before, healthcare has the ability to enhance the quality and duration of life. At the same time, healthcare has become so enormously costly that it can easily bankrupt governments and impoverish individuals and families. According to federal forecasters, by the year 2015 one in every five U.S. dollars will be spent on healthcare, for total annual healthcare spending of more than \$4 trillion. While the cost of healthcare is going up, the number of individuals and families without health insurance coverage is increasing. For many, the miracles of modern medicine may be unaffordable. Health services research investigates the relationship between the factors of cost, quality, and access to healthcare and their impact upon medical outcomes (i.e., death, disease, disability, discomfort, and dissatisfaction with care). Health services research addresses such key

questions as, Why is the cost of healthcare always increasing? How can healthcare costs be successfully contained without jeopardizing quality? How can medical errors be eliminated? What is the medical impact of not having health insurance coverage? The proposed encyclopedia addresses these and other important questions and issues.
