An experimental study was conducted to investigate the effects of density and viscosity on zero net liquid flow (ZNLF) in vertical pipes. Predicting liquid holdup under ZNLF conditions is necessary in several types of petroleum industry operations. These include predicting bottomhole pressures in pumping oil wells and the design of compact gas-liquid cylindrical cyclone (GLCC ©) 1 separators ...

Let the vertical eddy viscosity A_z be a constant and f be the Coriolis parameter, and let v_1 and v_2 be the fluid velocities in the eastward and northward directions, respectively. Verify that the horizontal momentum equations, $f v_2 + A_z \frac{\partial v_1}{\partial z} = 0$, $f v_1 + A_z \frac{\partial v_2}{\partial z} = 0$, have the solutions, $v_1 = V_0 e^{-\alpha z} \sin(\alpha z)$, $v_2 = V_0 e^{-\alpha z} \cos(\alpha z)$...

Eddy Viscosity - an overview | ScienceDirect Topics

The measurement of viscosity depends on the fact that under certain conditions the velocity of a gas bubble in a vertical tube is inversely proportional to the viscosity of the fluid in the tube; the work of Barr was directed toward a better understanding of this device.

The effects of variable viscosity and thermal conductivity on the natural convection heat transfer over a vertical plate embedded in a porous medium saturated by a nanofluid are investigated. In the nanofluid model, a gradient of nanoparticles concentration because of Brownian motion and thermophoresis forces is taken into account.
