Environmental management accounting is simply a specialised part of the management accounts that focuses on things such as the cost of energy and water and the disposal of waste and effluent. It is important to note at this point that the focus of environmental management accounting is not all on purely financial costs.

Until recently, research on environmental management accounting (EMA) has concentrated on developed countries and on cost-benefit analysis of implementing individual EMA tools. Using a comparative case study design, this book seeks to redress the balance and improve the understanding of EMA in management decision-making in emerging countries, focussing specifically on South-East Asian companies.

Sustainable development will not happen without substantial contributions from and leading roles of companies and business organizations. This requires the provision of adequate information on corporate social and ecological impacts and performance. For the last decade, progress has been made in developing and adapting accounting mechanisms to these needs but significant work is still needed to tackle the problems associated with conventional accounting. Until recently, research on environmental management accounting (EMA) has concentrated on developed countries and on cost –benefit analysis of implementing individual EMA tools. Using a comparative case study design, this book seeks to redress the balance and improve the understanding of EMA in management decision-making in emerging countries, focussing specifically on South-East Asian companies. Drawing on 12 case studies, taken from a variety of industries, Environmental Management Accounting: Case Studies of South-East Asian Companies explores the relationship between decision situations and the motivation for, and barriers to, the application of clusters of EMA tools as well as the implementation process itself. This book will be useful to scholars interested in the environmental and sustainability management accounting research field and those considering specific approaches to EMA within emerging economies.

The primary objective of the Environmental Management Accounting (EMA) Project is to promote the value of EMA as a tool that business can use for the dual purpose of improving environmental and financial performance. The project involved undertaking practical case studies that show the benefits achieved from EMA, and to provide practical how to examples of EMA within organisations operating within Australia. The case studies were undertaken between March and September 2002 and represent a number of different industry sectors. This report provides background information on EMA and summarises the results of the four case studies. The case studies involve the following organisations: AMP (in association with KPMG) ; Cormack Manufacturing (in association with PricewaterhouseCoopers) ; GH Michell & Sons (in association with Professor Craig Deegan, RMIT) ; Methodist Ladies College (in association with BDO Consultants)

Sustainability requires companies to develop in an economically, environmentally and socially sustainable manner. Corporate sustainable development in turn requires movement towards cleaner production. In order to recognize the potential from cleaner production – reduced costs and fewer environmental impacts through the reduced use of materials – environmental management accounting (EMA) is a necessary information management tool. Environmental Management Accounting for Cleaner Production reveals a set of tools for companies to collect, evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options. EMA is therefore the key for driving environmental progress, cost savings, increased competitiveness and corporate sustainability through the means of cleaner production.

This book brings together examples of leading thinking and international practice in the rapidly developing area of environmental management accounting .(EMA) The authors include academics and practitioners from industry and the subjects covered range from individual company experiences with implementing EMA to national experiences regarding the adoption and diffusion of EMA practices.

"The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives."--BOOK JACKET.

The primary objective of the EMA Project is to promote the value of EMA as a tool that business can use for the dual purpose of improving environmental and financial performance. The project involved undertaking practical case studies that show the benefits achieved from EMA, and to provide practical how to examples of EMA within organisations operating within Australia. The case studies were undertaken between March and September 2002 and represent a number of different industry sectors. Under the project a report (Environmental management accounting: an introduction and case studies for Australia / prepared by Professor Craig Deegan, RMIT) has also been produced. This report provides background information on EMA and summarises the results of the four case studies. The case studies involve the following organisations: AMP (in association with KPMG) ; Cormack Manufacturing (in association with PricewaterhouseCoopers) ; GH Michell & Sons (in association with Professor Craig Deegan, RMIT) ; Methodist Ladies College (in association with BDO Consultants) Å.

This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives.

In order to survive in the changing business environment,organisations should rethink their strategic philosophy and the role of management accounting. The primary focus of this book is on techniques and concepts of cost and management accounting for strategic business decisions.It focuses on both conventional and contemporary issues.The book will serve as a reference source for practicing accountants, senior executives and managers working in human resources, operations, and accounting divisions. As the principal focus of this book is on conceptual foundations, it would also be ideal for courses in graduate programs such as master's degree, MBA or Executive MBA.
