The structure of multilayer fabrics is based on the stitching pattern of the individual layers. It is either layer to layer or through the thickness. The pile weave structures include the terry towels and woven carpets. In addition to the ground yarns, these structures contain an additional set of yarns called pile yarns, which appears on either one or both sides of fabric.

Structural design is one of the most important steps during the design process for a black-and-white simulative fabric. It consists of the weave design and also the fabric structure design. The weave design should be approached from an image with a range of less than 256 greys to form shaded gamut weaves based on the detailed technical specification of the desired fabric. In general, there are ...

The performance numbers obtained show that Hyperledger Fabric deployed in a single cloud data center achieves an end-to-end throughput of more than 3,500 transactions per second with latency less than one second. While the research team refrains from making any direct comparisons to the other systems, the benchmarking effort has given the team valuable insight in the behavior of Fabric.
