All FIN messages except MT 999 messages are routed to the Message Verification queue (MP_verification). MT 999 messages are routed from the Message Creation queue to the Message Authorisation queue (MP_authorisation). If a SWIFT message has errors then it is not valid and the message is not routed.

Routing Messages - SWIFT FIN Guru
SWIFT Financial Application (FIN) messages. They have the following structure: {1: Basic Header Block} {2: Application Header Block} {3: User Header Block} {4: Text Block or body} {5: Trailer Block} These five SWIFT message blocks include header information, the body of the message, and a trailer. All blocks have the same basic format:

SWIFT message block structure - SWIFT FIN Guru
SWIFT message types are the format or schema used to send messages to financial institutions on the SWIFT network. The original message types were developed by SWIFT and a subset was retrospectively made into an ISO standard, ISO 15022. In many instances, SWIFT message types between custodians follow the ISO standard. This was later supplemented by a XML based version under ISO 20022.

SWIFT message types - Wikipedia
These are messages from a user to SWIFT or from SWIFT to a user, but not from one user to another. Financial Application allows to send messages from one user to another. It is the user to user service which includes the system messages MT0xx, the User to User Messages MT1xx through 9xx and other Service Messages such as Acknowledgements.

List of all SWIFT Messages Types | Paiementor
SWIFT FIN is a message type (MT) that transmits financial information from one financial institution to another. Each SWIFT message is represented by a three-digit number. The first number identifies the category to which the message belongs. The second and third numbers identify the message type. Each SWIFT message uses a format that has five possible blocks:

What is SWIFT FIN message? - Definition from WhatIs.com
The FIN error codes are divided into the following groups: Validation error codes Conditional semantic error codes Abort error codes All input messages are validated for syntax and semantic errors by the system. If there is an error, a validation error code is returned in the logical (negative) acknowledgement or in an MT 019 Abort Notification.
