Frequency Specific Microcurrent In Pain

Frequency-specific microcurrent (FSM) is a technique for treating pain by using low-level electrical current. The current is delivered to certain parts of the body in an attempt to relieve the pain. A frequency is the rate at which a sound wave or electronic pulse is produced. This measurement is registered in hertz (Hz).

All of the research and papers published on Frequency Specific Microcurrent (FSM) have been done using a device manufactured by Precision Microcurrent Inc. But any microcurrent device with two independent channels that provide three-digit specific frequencies such as 284 Hz (rather than 280 Hz) on each channel, using a ramped square wave and either polarized or alternating DC current can be used.

One of the best treatments that I have found is Frequency Specific Microcurrent (FSM)...This form of therapy works quickly, with minimum discomfort and often a rapid result...I could actually feel the tissue soften and melt under the microcurrent gloves. I can look forward to steady progress. I heartily recommend this treatment.

Papers - Frequency Specific Microcurrent Education said that kidney-stone pain had to be about spasm in the ureter, the tube that carries the stone from the kidney to the bladder. The frequency for spasm was 29 hertz on channel A. The frequency for the ureter was 60 hertz on channel B. It did absolutely nothing: no warmth, no relaxation or softening, nothing.
