The MDS Master Stations, built upon our modular communications platform, are used with SD Series and x710 series remote radios. The MDS Master Stations support full duplex communication in a protected 1+1 warm standby transceiver configuration to provide reliability for continuous use, high duty cycle applications associated with licensed narrowband Base Station and Repeater applications.

MDS Master Station :: Communications :: GE Digital Energy
From 1934 until the end of the 1930's, GE produced a 2-way mobile radio which was, depending on the year, a variation of the original 4GB1 transmitter shown below. This was GE's last AM VHF two-way police radio, as far as I have been able to determine, and the outbreak of war in 1941 probably ended production of this model, which was quite obsolete by that time.

A two-way radio is a radio that can both transmit and receive radio waves (a transceiver), unlike a broadcast receiver which only receives content. It is an audio (sound) transceiver, a transmitter and receiver in one unit, used for bidirectional person-to-person voice communication with other users with similar radios. Two-way radios are available in stationary (base station), mobile ...

The U.S. economy is the envy of the world, and the key to its success is technological innovation. In this fascinating and in-depth account reported from three continents, Robert Buderl turns the spotlight on corporate research and the management of innovation that is helping drive the economy's robust growth. Here are firsthand communiqués from inside the labs of a reborn IBM, resurgent GE and Lucent, research upstarts Intel and Microsoft, and other leading American firms -- as well as top European and Japanese competitors. It was only a few years ago that competitiveness experts -- U.S. well-wishers and naysayers alike -- concluded that America had lost its business and technological edge. The nation's companies, they asserted, couldn't match the development and manufacturing efficiency of overseas rivals. Yet now the nation is humming along, riding an unparalleled wave of innovation. Buderl tells us this turnaround has come on many fronts -- in marketing, sales, manufacturing, and the creation of start-up companies. But Engines of Tomorrow deals with a central element that has gone largely unexamined: corporate research. It's the research process that provides the technologies that spur growth. Research is behind the renaissance of IBM, the stunning growth of Lucent, and much of the steamrolling American recovery. Focusing on the fast-moving communications-computer-electronics sector, Buderl profiles some of the world's leading thinkers on innovation, talks with top inventors, and describes the exciting technologies coming down the pike -- from information appliances to electronic security and quantum computing. In the process, he examines the vital strategic issues in which central labs play a determining role, including: How IBM's eight labs around the world figure in Lou Gerstner's plans to achieve consistent double-digit growth -- and to join GE as a \$100 billion concern. Why Xerox's famed Palo Alto Research Center is vying to resuscitate its company's lagging fortunes by sending anthropologists into the field to study the hidden ways people really work. What Hewlett-Packard will do without its original instrument business, recently spun off as Agilent Technologies. The business was central to HP Labs' MC2 philosophy of merging research expertise in measurement, computation, and communication -- and its departure removed a lot that was unique about HP. How the November 1999 federal court finding that Microsoft operates a monopoly hinders the Seattle giant's acquisition plans and makes it increasingly vital for nine-year-old Microsoft Research to lead the way in innovating from within. Could this be the next great lab for the twenty-first century? With authority and undaunted optimism about the underlying vitality of the research process, Buderl discusses these issues and reveals the future of some of the world's best and most powerful companies.

Beginning with 1937, the April issue of each vol. is the Fleet reference annual.
