This chapter aims to take stock of existing research on emerging economy multinationals (EMNEs) in advanced host economies, a phenomenon often referred to as "South-North investment." Both the extent of such investments and the stage in the firms' internationalization life cycle in which these occur challenge some of the tenets of the traditional theories of multinational enterprises.

economy. They have become more international and compete more extensively with companies in developed countries. For these reasons, an understanding of managing businesses in emerging markets is a fundamental skill for competing in the twenty-first century. The Oxford Handbook of Management in Emerging Markets identifies key elements of the business systems and competition in emerging markets around the world, and then looks at competitive strategies of companies going into and coming out of these countries. While business is business, the handbook's focus is on how management differs depending on the different environmental characteristics in emerging markets, such as the role of the government, the potential weakness of infrastructure, and the skill and innovation bases available locally in emerging markets, among other elements. The volume is organized into five sections. The first section establishes conceptual perspectives for exploring the current business environment in emerging markets. The second section focuses on questions surrounding governance and markets. The third explores multinational enterprises (MNEs) in emerging economies, while the fourth section looks at local firms and emerging market MNEs. The fifth and final section looks at management in emerging markets within specific countries and regions around the world. This handbook is a vital resource for scholars, students, and managers looking to expand into emerging economies by providing comprehensive analyses of functional areas from human resources to finance to marketing, and on issues such as family businesses, state-owned enterprises, and the bottom of the pyramid.

The economic growth of emerging markets has been unparalleled in recent history, accounting for 50 per cent of global economic output. Despite this reality, this much-needed Handbook is

Describing the linkages between emerging and developed markets, this collection systematically explores several crucial issues in asset valuation and risk management. Contributors present new theoretical constructions and empirical methods for handling cross-country volatility and sudden regime shifts. Usually attractive for investors because of the superior growth they can deliver, emerging markets can have a low correlation with developed markets. This collection advances your knowledge about their inherent characteristics. Foreword by Ali M. Kutan Concentrates on post-crisis roles of emerging markets in the global economy Reports on key theoretical and technical developments in emerging financial markets Forecasts future developments in linkages among developed and emerging economies

contexts like Central & Eastern Europe and India. Comparing the ways in which marketing is performed in emerging and advanced economies, the chapters explore various aspects including business-to-business marketing relationships, the role of multi-cultural markets in marketing and retail marketing of multinational corporations, corporate social responsibility and consumer loyalty.

The growth of the multinational enterprise (MNE) has led to an increasing interest in international business strategy from scholars, professionals, and policy makers alike. MNEs must contend with challenges in both their home and host international markets, and increasingly uncertain conditions in the international business environment demand superior firm-level capabilities for multinational firms to achieve and maintain competitive advantages in the long-run. This Handbook explores the progress made in international business strategy theory and practice in the last few decades. Written by an international team of leading experts, it captures the differences in motivations and decision-making processes between smaller and larger firms, private, family, and state owned firms, and emerging or developed market multinationals. It elaborates on the links between international strategy and the social responsibilities of the firm in its various host market contexts, including the deployment of effective and ethical human resource practices in international markets. Most importantly, it lays out how the classic principles of international competitive strategy are transformed in today's markets, in great part due to digitalization, and provides suggestions on how MNEs can develop international business strategies to respond to these transformations. The implications of these discussions for strategy and practice are becoming ever more profound. This
