Top scholars offer historical, legal, political, and socio-economic insights into the causes, effects, and solutions to urban sprawl in this even-handed account of the spreading suburbanization of America.

Also available on Authority Federal Practice Library CD-ROM.

The Handbook of Irrigation System Selection for Semi-Arid Regions compares the various types of available irrigation systems for different regions and conditions, and explains how to analyze field data to determine the suitability of the land for surface, sprinkle, or drip irrigation systems. The book focuses on strategies for irrigation development and management and examines deficit irrigation and partial root-zone drying systems. Also, solute leaching modeling under different irrigation systems, soil moisture conditions, and organic fertilizer application in arid areas are discussed. Further, it examines multi-criteria decision making for irrigation management and the appraisal of agricultural lands for irrigation in hot, sub-humid regions. Features: Presents comparative analysis to aid in the selection of the most appropriate types of irrigation systems according to land characteristics. Includes numerous practical case studies. Offers parametric evaluation systems for irrigation purposes. Considers data from semi-arid zones, each with different sub-climates. Focusing on semi-arid land, the book highlights parametric evaluation systems for irrigation purposes, along with the use of analytical hierarchy processes integrated with GIS to determine which systems are best suited. This comprehensive and well-illustrated handbook will be of great interest to students, professionals, and researchers involved with all aspects of irrigation in semi-arid regions.

The Oxford Handbook of Urban Planning is an authoritative volume on planning, a long-established professional social science discipline in the U.S. and throughout the world. This handbook collects together over 45 noted field experts to discuss three key questions: Why plan? How and what do we plan? Who plans for whom? These three questions are then applied across three major topics in planning. Covering the key components of the discipline, this book is a comprehensive, discipline-defining text suited for students and seasoned planners alike.

This text outlines the importance of biopsychosocial factors in improving medical care, and illustrates evidence-based, state-of-the-art interventions for patients with a variety of medical conditions. Each chapter is focused on a particular health concern or illness, which is described both in terms of prevalence and frequent psychological and psychiatric comorbidities that may present to clinicians working with these populations. Consistent with evidence-based care, information on the efficacy of the treatments being described is presented to support their continued use. To accommodate the needs of clinicians, we describe population specific approaches to treatment, including goal settings, modules and skills as well as strategies to assess and monitor progress. To facilitate learning, each chapter contains one or more case examples that explicate the skills described to convey change within a behavioral medicine protocol. Each chapter also includes resources in the form of books and websites to gain additional knowledge and detail as needed. Authors are experts in the field of each chapter, ensuring that information presented is recent and of high quality.
