Discusses the lives and scientific contributions of more than fifty women chemists from antiquity through the present day.

NEW YORK TIMES BESTSELLER • GOOD MORNING AMERICA BOOK CLUB PICK • A must-read debut! Meet Elizabeth Zott: a “ formidable, unapologetic and inspiring ” (PARADE) scientist in 1960s California whose career takes a detour when she becomes the unlikely star of a beloved TV cooking show in this novel that is “ irresistible, satisfying and full of fuel. It reminds you that change takes time and always requires heat ” (The New York Times Book Review). “ A unique heroine ... you'll find yourself wishing she wasn ' t fictional. ” —Seattle Times Chemist Elizabeth Zott is not your average woman. In fact, Elizabeth Zott would be the first to point out that there is no such thing as an average woman. But it ' s the early 1960s and her all-male team at Hastings Research Institute takes a very unscientific view of equality. Except for one: Calvin Evans; the lonely, brilliant, Nobel – prize nominated grudge-holder who falls in love with—of all things—her mind. True chemistry results. But like science, life is unpredictable. Which is why a few years later Elizabeth Zott finds herself not only a single mother, but the reluctant star of America ' s most beloved cooking show Supper at Six. Elizabeth ' s unusual approach to cooking (“ combine one tablespoon acetic acid with a pinch of sodium chloride ”) proves revolutionary. But as her following grows, not everyone is happy. Because as it turns out, Elizabeth Zott isn ' t just teaching women to cook. She ' s daring them to change the status quo. Laugh-out-loud funny, shrewdly observant, and studded with a dazzling cast of supporting characters, Lessons in Chemistry is as original and vibrant as its protagonist.

"Biogeochemistry considers how the basic chemical conditions of the Earth—from atmosphere to soil to seawater—have been and are being affected by the existence of life. Human activities in particular, from the rapid consumption of

resources to the destruction of the rainforests and the expansion of smog-covered cities, are leading to rapid changes in the basic chemistry of the Earth. This expansive text pulls together the numerous fields of study encompassed by biogeochemistry to analyze the increasing demands of the growing human population on limited resources and the resulting changes in the planet's chemical makeup. The book helps students extrapolate small-scale examples to the global level, and also discusses the instrumentation being used by NASA and its role in studies of global change. With extensive cross-referencing of chapters, figures and tables, and an interdisciplinary coverage of the topic at hand, this updated edition provides an excellent framework for courses examining global change and environmental chemistry, and is also a useful self-study guide."--Publisher's website.

The Study Guide and Selected Solutions Manual assists students with the text material. It contains learning objectives, chapter outlines, additional problems with self-tests and answers, and answers to the odd-numbered problems in the text.

This resource contains over sixty laboratory experiments and is specifically referenced to Chemistry for Changing Times.

This translation of The Iliad equals Fitzgerald's earlier Odyssey in power and imagination. It recreates the original action as conceived by Homer, using fresh and flexible blank verse that is both lyrical and dramatic.
