The aim of this paper is to present a model that can perform sentiment analysis of real data collected from Twitter. Data in Twitter is highly unstructured which makes it difficult to analyze. However, our proposed model is different from prior work in this field because it combined the use of supervised and unsupervised machine learning algorithms.

In this paper, we automate the task of public shaming detection in Twitter from the perspective of victims and explore primarily two aspects, namely, events and shamers. Shaming tweets are categorized into six types: abusive, comparison, passing judgment, religious/ethnic, sarcasm/joke, and whataboutery, and each tweet is classified into one of these types or as nonshaming.

This book constitutes the proceedings of the 6th International Conference on Social Informatics, SocInfo 2014, held in Barcelona, Spain, in November 2014. The 28 full papers and 14 short papers presented in this volume were carefully reviewed and selected from 147 submissions. The papers are organized in topical sections such as network, communities, and crowds; interpersonal links and gender biases; news, credibility, and opinion formation; science and technologies; organizations, society and social good.

International conference on Electronics and Sustainable Communication Systems (ICESC 2020) is one of the eminent conferences organized by Hindustan Institute of Technology, Coimbatore, India dedicated to drive innovation in nearly every aspect of electronic and communication systems The primary aim of ICESC 2020 is to promote the high quality and sustainable research works in an international platform of scientists, researchers, and industrialists by bringing together the state of the art research work in different facets of electronics and communication systems and discuss, share and exchange the research ideas under one common platform Prospective authors are invited to contribute and address different themes and topics of the conference

There has been a noticeable shift in the way the news is accessed and consumed, and most importantly, the rise of fake news has become a common occurrence in the media. With news becoming more accessible as technology advances, fake news can spread rapidly and successfully through social media, television, websites, and other online sources, as well as through the traditional types of newscasting. The spread of misinformation when left unchecked can turn fiction into fact and result in a mass misconception of the truth that shapes opinions, creates false narratives, and impacts multiple facets of society in potentially detrimental ways. With the rise of fake news comes the need for research on the ways to alleviate the effects and prevent the spread of misinformation. These tools, technologies, and theories for identifying and mitigating the effects of fake news are a current research topic that is essential for maintaining the integrity of the media and providing those who consume it with accurate, fact-based information. The Research Anthology on Fake News, Political Warfare, and Combatting the Spread of Misinformation contains hand-selected, previously published research that informs its audience with an

## Access Free Ieee Paper On Twitter

advanced understanding of fake news, how it spreads, its negative effects, and the current solutions being investigated. The chapters within also contain a focus on the use of alternative facts for pushing political agendas and as a way of conducting political warfare. While highlighting topics such as the basics of fake news, media literacy, the implications of misinformation in political warfare, detection methods, and both technological and human automated solutions, this book is ideally intended for practitioners, stakeholders, researchers, academicians, and students interested in the current surge of fake news, the means of reducing its effects, and how to improve the future outlook.
