As sustainable development becomes an increasingly important strategic issue for all organizations, there is a growing need for management and executive education to adapt to this new reality. This textbook provides a theoretically sound and highly relevant introduction to the topic of socially and environmentally responsible business. The authors take a " competence-based approach " to responsible management education. The book aims to go beyond the traditional domains of teaching and towards the facilitation of learning across key competences. Each chapter in this book has a section dedicated to exercises that cover five core competences – know, think, do, relate, be – to enable self-directed transformative learning. Drawing from the classic background theories such as corporate sustainability, business ethics, and corporate social responsibility, these concepts are applied to the most up-to-date practices. The book covers an international perspective, featuring cases from countries all around the world, has a strong theoretical basis, and fully integrates the topics of sustainability, responsibility and ethics. The book includes a wide variety of tools for change at individual, company and systemic levels. Published with the Principles for Responsible Management Education (PRME), a United Nations Global Compact supported initiative, this is both an essential resource for business students at all levels and self-study handbook for executives.
