Kawasaki Voyager XII cables part 1 - YouTube

Front wheel straight. Loosen both cables for max play. First tighten the deceleration "lower cable" cable so there is no play. Reach behind the air filter and hold the throttle plate closed. When done tighten the lock nut. Next just begin to tighten the acceleration "upper cable" where you feel the throttle handle feels slightly loose.

The only adjustments you can make is to replace the fluid, make sure the little return port in the master cylinder is clear of obstruction and all debris is gone. Fill the reservoir with the proper amount of DOT 4 and work the clutch lever as you fill. If no air is in the system the clutch should work normally.

Clutch adjustment?? - American Voyager Association

Next, tighten the deceleration adjuster (the cable that pulls the grip into the throttle-closed position) so that there is no slack when the throttle is held closed. Tighten the deceleration locking nut. Now, adjust the acceleration cable ' s adjuster until the desired amount of free play is present in the grip and tighten its locking nut.

How To Adjust Throttle Free Play and Why

To get at the nut, use a hole saw and drill a one inch hole in the back of the mirror body. This gives you access to the adjusting nut, which you can then reach and tighten with a 10mm socket on a swivel joint. After the nut has been tightened, cover the hole with a hole plug (Kawasaki Part No. 11012-1751-6Z). See diagrams below:

AVA-Voyager XII Tech Tips - American Voyager Association

The throttle pulley and the throttle valves of this system are not connected mechanically, and the throttle valves are electrically operated. On the other hand, the thro- tle grip and the throttle pulley are connected with two throttle cables in the same way as that for the conventional mechanically-operated throttle valve system to ensure the throttle operation feel without any strangeness.
