Machine Learning is a pathway to and subfield of artificial intelligence that enables computer systems to gain knowledge, improve from experience, and make predictions with minimal human intervention. Machine learning programs discover patterns and interpret data using training models or a learning data set.

Machine learning focuses on the development of computer programs that can access data and use it to learn for themselves. The process of learning begins with observations or data, such as examples, direct experience, or instruction, to look for patterns in data and make better decisions in the future based on the examples that we provide.
