In our book, Manual Therapy for the Peripheral Nerves, we underlined the importance of soliciting the body's proprioceptive responses through manual therapy. This is because all tissues are endowed with a system of mechanoreceptors connected to the cerebellum and the thalamus, and it is through their agency that we obtain both local and general results. Cranial nerves supply sensitivity to the bone, periosteum, sutures and meninges. Thus, central to obtaining an effect on the dura mater ...
