Materials and Reliability Handbook for Semiconductor Optical and Electron Devices provides comprehensive coverage of reliability procedures and approaches for electron and photonic devices. These include lasers and high speed electronics used in cell phones, satellites, data transmission systems and displays. Lifetime predictions for compound semiconductor devices are notoriously inaccurate due to the absence of standard protocols. Manufacturers have relied on extrapolation back to room temperature of accelerated testing at elevated temperature. This technique fails for scaled, high current density devices. Device failure is driven by electric field or current mechanisms or low activation energy processes that are masked by other mechanisms at high temperature. The Handbook addresses reliability engineering for III-V devices, including materials and electrical characterization, reliability testing, and electronic characterization. These are used to develop new simulation technologies for device operation and reliability, which allow accurate prediction of reliability as well as the design specifically for improved reliability. The Handbook emphasizes physical mechanisms rather than an electrical definition of reliability. Accelerated aging is useful only if the failure mechanism is known. The Handbook also focuses on voltage and current acceleration stress mechanisms.

An introduction to marketing concepts, strategies and practices with a balance of depth of coverage and ease of learning. Principles of Marketing keeps pace with a rapidly changing field, focussing on the ways brands create and capture consumer value. Practical content and linkage are at the heart of this edition. Real local and international examples bring ideas to life and new feature 'linking the concepts' helps students test and consolidate understanding as they go. The latest edition enhances understanding with a unique learning design including revised, integrative concept maps at the start of each chapter, end-of-chapter features summarising ideas and themes, a mix of mini and major case studies to illuminate concepts, and critical thinking exercises for applying skills.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. With 30 exercises covering all body systems; a clear, engaging writing style; and full-color illustrations, this updated edition offers you everything needed for a successful lab experience. This edition features updated pre-lab quizzes at the beginning of each exercise, new Group Challenge activities, and an updated art program. A wide variety of laboratory exercises and activities gives students a hands-on lab experience, including organ and body dissection activities for the cat, sheep, and cow. Beautiful, full-color art and photos help students visualize anatomical structures for laboratory practice. Thorough, clearly-written exercises assist students in comprehending and retaining the material. They include background information, a list of objectives, step-by-step instructions, and exercise review sheets. Integrated to follow each lab exercise, the review sheets can be used for pre- or post-lab review. Human and cat anatomy dissection photographs/plates are included. The " Organ Systems Overview " dissection exercise includes instruction on both rat and human dissection. Color photographs of rat and human dissection views further enhance the exercise. The spiral binding gives students a useful, convenient format for taking notes during lab.
