The world is witnessing a rapid rise in the number of victims of human trafficking and of migrants—voluntary and involuntary, internal and international, authorized and unauthorized. In the first two decades of this century alone, more than 65 million people have been forced to escape home into the unknown. The slow-motion disintegration of failing states with feeble institutions, war and terror, demographic imbalances, unchecked climate change, and cataclysmic environmental disruptions have contributed to the catastrophic migrations that are placing millions of human beings at grave risk. Humanitarianism and Mass Migration fills a scholarly gap by examining the uncharted contours of mass migration. Exceptionally curated, it contains contributions from Jacqueline Bhabha, Richard Mollica, Irina Bokova, Pedro Noguera, Hirokazu Yoshikawa, James A. Banks, Mary Waters, and many others. The volume ' s interdisciplinary and comparative approach showcases new research that reveals how current structures of health, mental health, and education are anachronistic and out of touch with the new cartographies of mass migrations. Envisioning a hopeful and realistic future, this book provides clear and concrete recommendations for what must be done to mine the inherent agency, cultural resources, resilience, and capacity for self-healing that will help forcefully displaced populations.

This book reflects on science education in the first 20 years of the 21st century in order to promote academic dialogue on science education from various standpoints, and highlights emergent new issues, such as education in science education research. It also defines new research agendas that should be " moved forward " and inform new trajectories through the rest of the century. Featuring 21 thematically grouped chapters, it includes award-winning papers and other significant papers that address the theme of the 2018 International Science Education Conference.

This volume considers a range of ways in which bilingual programs can make a contribution to aspects of human and economic development in the global South. The authors examine the consequences of different policies, programs, and pedagogies for learners and local communities through recent ethnographic research on these topics. The revitalization of minority languages and local cultural practices, management of linguistic and cultural diversity, and promotion of equal opportunities (both social and economic) are all explored in this light.

This edited volume brings together a broad range of international science education studies, focusing on the interplay of teaching and learning science. It recognizes the complexity present in today's education, associated with major science related issues faced by society, such as climate change, diseases and pandemics, global conflicts over energy, food and water. The studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners. They bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow.

This two-volume set of LNAI 11838 and LNAI 11839 constitutes the refereed proceedings of the 8th CCF Conference on Natural Language Processing and Chinese Computing, NLPC 2019, held in Dunhuang, China, in October 2019. The 85 full papers and 56 short papers presented were carefully reviewed and selected from 492 submissions. They are organized in the following topical sections: Conversational Bot/QA/IR; Knowledge graph/IE; Machine Learning for NLP; Machine Translation; NLP Applications; NLP for Social Network; NLP Fundamentals; Text Mining; Short Papers; Explainable AI Workshop; Student Workshop; Evaluation Workshop.

The collection of 21 provocative essays gives you a fresh look at today ' s most pressing public policy concerns in science education, from how students learn science to building science partnerships to the ramifications of the No Child Left Behind legislation.
