This magisterial analysis of human history - from "Lucy," the first hominid, to the Great Recession of 2008 - combines the insights of earlier generations of Marxist historians with radical new ideas about the historical process.Reading history against the grain, Neil Faulkner reveals that what happened in the past was not predetermined. Choices were frequent and numerous. Different outcomes - liberation or barbarism - were often possible. Rejecting the top-down approach of conventional history, Faulkner contends that it is the mass action of ordinary people that drives great events.At the beginning of the 21st century - with economic disaster, war, climate catastrophe and deep class divisions - humans face perhaps the greatest crisis in the long history of our species. The lesson of A Marxist History of the World is that, since we created our past, we can also create a better future.

This volume is the first to deal with Turkish communicative development and disorders, reflecting the use of Turkish by a sizeable population in multilingual settings in Europe, USA, and Australia. In addition to Speech-language Pathologists, the book will be of interest to professionals from related fields such as clinical linguistics, psychology, psycholinguistics, neurolinguistics, audiology, and special education. This book presents a compendium of information about the profession of speech-language pathology, cultural differences, assessment materials and research done in communication disorders in Turkey. It also covers acquisition and disorders in multilingual contexts where there is significant Turkish immigration.

This book is composed by the papers written in English and accepted for presentation and discussion at The 2021 International Conference on Information Technology & Systems (ICITS 21), held at the Universidad Estatal Peninsula de Santa Elena, in Libertad, Ecuador, between the 10th and the 12th of February 2021. ICITS is a global forum for researchers and practitioners to present and discuss recent findings and innovations, current trends, professional experiences and challenges of modern information technology and systems research, together with their technological development and applications. The main topics covered are information and knowledge management; organizational models and information systems; software and systems modelling; software systems, architectures, applications and tools; multimedia systems and applications; computer networks, mobility and pervasive systems; intelligent and decision support systems; big data analytics and applications; human–computer interaction; ethics, computers & security; health informatics; and information technologies in education.

This program shows how elementary students can use skillstreaming in order to use proper social skills in dealing with difficult situations. Skill cards list the steps needed to successfully perform each of the 60 prosocial skills outlined in skillstreaming the elementary school child.

Why the social character of scientific knowledge makes it trustworthy
Are doctors right when they tell us vaccines are safe? Should we take climate experts at their word when they warn us about the perils of global warming? Why should we trust science when so many of our political leaders don't? Naomi Oreskes offers a bold and compelling defense of science, revealing why the social character of scientific knowledge is its greatest strength—and the greatest reason we can trust it. Tracing the history and philosophy of science from the late nineteenth century to today, this timely and provocative book features a new preface by Oreskes and critical responses by climate experts Otmar Edenhofer and Martin Kowarsch, political scientist Jon Krosnick, philosopher of science Marc Lange, and science historian Susan Lindee, as well as a foreword by political theorist Stephen Macedo.

Humanity is on the cusp of an exciting longevity revolution. The first person to live to 150 years has probably already been born. What will your life look like when you live to be over 100? Will you be healthy? Will your marriage need a sunset clause? How long will you have to work? Will you finish one career at sixty-five only to go back to school to learn a new one? And then, will you be happily working for another sixty years? Maybe you'll be a parent to a newborn and a grandparent at the same time. Will the world become overpopulated? And how will living longer affect your finances, your family life, and your views on religion and the afterlife? In 100 Plus, futurist Sonia Arrison takes us on an eye-opening journey to the future at our doorsteps, where science and technology are beginning to radically change life as we know it. She introduces us to the people transforming our lives: the brilliant scientists and genius inventors and the billionaires who fund their work. The astonishing advances to extend our lives—and good health—are almost here. In the very near future fresh organs for transplants will be grown in laboratories, cloned stem cells will bring previously unstoppable diseases to their knees, and living past 100 will be the rule, not the exception. Sonia Arrison brings over a decade of experience researching and writing about cutting-edge advances in science and technology to 100 Plus, painting a vivid picture of a future that only recently seemed like science fiction, but now is very real. 100 Plus is the first book to give readers a comprehensive understanding of how life-extending discoveries will change our social and economic worlds. This illuminating and indispensable text will help us navigate the thrilling journey of life beyond 100 years.
