**Perforating Casing  
Collar Locator (CCL)**

Hunting's Logging  
CCL, normally run  
with a gamma ray,  
CBL or other cased-  
hole logging tools,  
can be used to make  
a depth correlation  
between the casing  
collars, and the open  
hole log of the well.  
Since open hole logs

# Bookmark File PDF Perforating

are used to select completion depths, the CCL log becomes a key depth control measurement for perforating, and for helping ensure the depth correlation of other wireline services performed in cased hole.

The modern magnetic casing collar locator (CCL) was developed in the late 1940's and quickly displaced the earlier methods. The old royalty structure for the magnetic CCL was curious; if only a CCL log was run, no royalty fee was due, but if the CCL was run in conjunction with a
