The Petrel platform is available on-premise and in the DELFI cognitive E&P environment, for geoscientists and engineers to analyze subsurface data from exploration to production, enabling them to create a shared vision of the reservoir. This shared earth approach empowers companies to standardize workflows across E&P and make more informed decisions with a clear understanding of both opportunities and risks.

To take full advantage of the uncertainty handling in Petrel, you need to have an understanding of the Workflow editor, which is the building block of the Uncertainty and optimization process. Day two will focus on understanding sensitivities and uncertainties of a Base case volumetric reservoir model.

The Structural gridding process allows you to construct structured stair-stepped corner point grids and unstructured depogrids from the Petrel Structural framework model. In this final session, the participants will learn about the characteristics and workflows for structured stair-stepped grids and unstructured depogrids.

The Petrel gridding workflow helped the drilling team to work in a proactive mode and better anticipate problems that could lead to nonproductive time or less-than-optimal reservoir contact. It also enhanced collaboration between disciplines, including the drilling engineering staff, because it provided a common collaboration platform for the subsurface team.

The software to be used is Petrel™, which is a product of Schlumberger, used to build 3D geological models of petroleum reservoirs. It was founded in 1996, and commercially released in 1998. It became part of the Schlumberger Information Solutions in January 2003. The project is divided in chapters as indicated in the Petrel Workflow Tools

The Petrel 2007.1 release expands the application's seismic-to-simulation scope with greater capabilities for exploration workflows. Petrel software now handles large-scale seismic surveys and regional scale 2D lines. Fracture modeling and dual porosity capabilities support carbonates and unconventional gas workflows.

Petrel (reservoir software) - Wikipedia

Designed for oil and gas industries, it is a cloud-based platform that helps with features such as automated workflows, uncertainty analysis, and reservoir engineering.
