Radio Production Worktext, 5ED is designed to provide an introduction of the modern radio production studio, the equipment found in that studio, and basic techniques to accomplish radio production work. The text also emphasizes digital equipment but also includes information on the older analog equipment still used in radio. The worktext format combines information, Q&As, and projects, providing a complete resource for teaching and learning, either in a formal classroom setting or as a self-study guide for the individual. The companion CD-ROM provides project material and demonstrations of key concepts. Radio Production Worktext's clear and simple approach makes it a useful reference for the entry-level broadcaster. The new edition focuses on digital technologies but also covers the relevant analog technologies and their role, while continuing to reflect all tools and methods commonly in use. Some chapters have been reordered to strengthen the text, in recognition of the importance of digital technologies to the whole of the production process - and will be in the front of the book.
