Quicksand is a non-Newtonian fluid made of sand mixed with water or air. It changes its viscosity in response to stress or vibration, allowing you to sink, but making it hard to escape. You can only sink into quicksand up to your waist. Really, the only way to drown from the quicksand is to fall into it head first or face first.

Quicksand is an interesting natural phenomenon -- it is actually solid ground that has been liquefied by a saturation of water. The " quick " refers to how easily the sand shifts when in this semiliquid state. Quicksand is not a unique type of soil; it is usually just sand or another type of grainy soil.

Quicksand (TV series) - Wikipedia

While quicksand isn't nearly as dangerous as it looks in the movies, it is a real phenomenon. Just about any sand or silt can temporarily become quicksand if it is sufficiently saturated with water and/or subjected to vibrations, such as those that occur during an earthquake. Here's what to do if you find yourself with that sinking feeling. Part 1

Quicksand is an American post-hardcore band from New York City, United States, founded in 1990. Their debut self-titled EP was followed by two major label albums, Slip (1993) and Manic Compression (1995). Quicksand's sound has been compared to that of post-hardcore bands Fugazi and Helmet.

Quicksand (American band) - Wikipedia

Quicksand—that is, sand that behaves as a liquid because it is saturated with water—can be a mucky nuisance, but it's basically impossible to die in the way that is depicted in movies. That's because quicksand is denser than the human body.

Quicksand is usually found in hollows at the mouths of large rivers or along flat stretches of streams or beaches where pools of water become partially filled with sand and an underlying layer of stiff clay or other dense material prevents drainage. Mixtures of sand, mud, and vegetation in bogs often act like true quicksands.
