'Raptor: A Journey Through Birds' is a lyrical, poetic, and occasionally superfluous endeavour in nature writing; James Macdonald Lockhart writes with the ease and finesse of a weathered pro. Admittedly, his prose is sometimes overbearingly flamboyant but it's difficult not to see why he romanticises the raptors he discusses so ardently - his enthusiasm is infectious.

Raptor: A Journey Through Birds | NHBS Academic ...

From the merlin to the golden eagle, the goshawk to the honey buzzard, James Macdonald Lockhart's stunning debut is a quest of beak, talon, wing, and sky. On its surface, Raptor is a journey across the British Isles in search of fifteen species of birds of prey, but as Lockhart seeks out these elusive predators, his quest becomes so much more: an incomparably elegant elegy on the beauty of the British landscape and, through the birds, a journey toward understanding an awesome power at the ...

Raptor: A Journey through Birds, Lockhart

Of all the birds of the British Isles, the raptor reigns supreme, sparking the imagination like no other. In this magnificent hymn to these beautiful animals, James Macdonald Lockhart explores all fifteen breeding birds of prey on these shores – from the hen harrier swimming over the land in the dregs of a May gale on Orkney, to the ghostly sparrowhawk displaying in the fields around his ...

raptor-a-journey-through-birds 1/1 Downloaded from calendar.pridesource.com on November 14, 2020 by guest [EPUB] Raptor A Journey Through Birds Thank you enormously much for downloading raptor a journey through birds.Maybe you have knowledge that, people have look numerous times for their favorite books like this raptor a journey through birds, but end in the works in harmful downloads.

As evidenced by the incredible success of Helen MacDonald's *H is for Hawk*, and the legions of fans of *Pale Male*, the incredible red-tailed hawk of 5th avenue, we are full of rapture for raptors. James Macdonald Lockhart, is among the many who have sought out these incredible birds, and in this lyrical work of natural history he seeks out 15 different raptors, in 15 different landscapes across England: a journey in search of raptors, a journey through the birds and into their worlds. Raptors are by nature scarce and extremely elusive. Of Pandionidae (osprey), Accipitridae (broad-winged harrier, eagle, buzzard, red kite) and Falconidae (peregrine, sparrowhawk etc.) only widespread buzzards, kestrels and kites are easily seen. Lockhart follows loosely the trail of 19th-century Scottish naturalist and artist William MacGillivray (1796-1852), As Philip Hoare wrote of it, James MacDonald Lockhart puts the rapture back in the raptor. This is in-the-moment writing, raw in beak and claw. With its gorgeously felt sense of life and place, Raptor rips at its words, turning them into exquisite portraits of the utter wild, shaping soaring, obsessive beauty out of the British landscape and its imperial birds"

"In 1833, Charles Darwin was astonished by an animal he met in the Falkland Islands: handsome, social, and oddly crow-like falcons that were 'tame and inquisitive, quarrelsome and passionate,' and so insatiably curious that they stole hats, compasses, and other valuables from the crew of the *Beagle*. Darwin wondered why these birds were confined to remote islands at the tip of South America, sensing a

larger story, but he set this mystery aside and never returned to it. Almost two hundred years later, Jonathan Meiburg ... takes us through South America, from the fog-bound coasts of Tierra del Fuego to the tropical forests of Guyana, in search of these birds: striated caracaras, which still exist, though they're very rare"--Publisher marketin

An exhilarating exploration of the science and wonder of global bird migration. In the past two decades, our understanding of the navigational and physiological feats that enable birds to cross immense oceans, fly above the highest mountains, or remain in unbroken flight for months at a stretch has exploded. What we've learned of these key migrations—how billions of birds circumnavigate the globe, flying tens of thousands of miles between hemispheres on an annual basis—is nothing short of extraordinary. Bird migration entails almost unfathomable endurance, like a sparrow-sized sandpiper that will fly nonstop from Canada to Venezuela—the equivalent of running 126 consecutive marathons without food, water, or rest—avoiding dehydration by "drinking" moisture from its own muscles and organs, while orienting itself using the earth's magnetic field through a form of quantum entanglement that made Einstein queasy. Crossing the Pacific Ocean in nine days of nonstop flight, as some birds do, leaves little time for sleep, but migrants can put half their brains to sleep for a few seconds at a time, alternating sides—and their reaction time actually improves. These and other revelations convey both the wonder of bird migration and its global sweep, from the mudflats of the Yellow Sea in China to the remote mountains of northeastern India to the dusty hills of southern Cyprus. This breathtaking work of nature writing from Pulitzer Prize finalist Scott Weidensaul also introduces readers to those scientists, researchers, and bird lovers trying to preserve global migratory patterns in the face of climate change and other environmental challenges. Drawing on his own extensive fieldwork, in *A World on the Wing* Weidensaul unveils with dazzling prose the miracle of nature taking place over our heads.

One of the New York Times Book Review's 10 Best Books of the Year One of Slate's 50 Best Nonfiction Books of the Last 25 Years ON MORE THAN 25 BEST BOOKS OF THE YEAR LISTS: including TIME (#1 Nonfiction Book), NPR, O, The Oprah Magazine (10 Favorite Books), Vogue (Top 10), Vanity Fair, Washington Post, Boston Globe, Chicago Tribune, Seattle Times, San Francisco Chronicle (Top 10), Miami Herald, St. Louis Post Dispatch, Minneapolis Star Tribune (Top 10), Library Journal (Top 10), Publishers Weekly, Kirkus Reviews, Slate, Shelf Awareness, Book Riot, Amazon (Top 20) The instant New York Times bestseller and award-winning sensation, Helen Macdonald's story of adopting and raising one of nature's most vicious predators has soared into the hearts of millions of readers worldwide. Fierce and feral, her goshawk Mabel's temperament mirrors Helen's own state of grief after her father's death, and together raptor and human "discover the pain and beauty of being alive" (People). *H Is for Hawk* is a genre-defying debut from one of our most unique and transcendent voices.

Raptors are formally classified into five families and include birds—such as eagles, ospreys, kites, true hawks, buzzards, harriers, vultures, and falcons—that are familiar and recognized by many observers. These diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat, and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits, and long-distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance, not only as ecological entities but also as inspirational tokens across natural and human-dominated landscapes. His book offers a comprehensive and accessible account of raptors, including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology and feeding behavior, and threats to their survival in a human-dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk-watchers, science educators, schoolchildren, and the general public, along with new students in the field of raptor biology, to understand and appreciate these birds, and in so doing better protect them.

From majestic Bald Eagles to tiny Elf Owls, raptors are nature's most fascinating and powerful birds. As predators with wide ranging habitats and food sources, raptors also serve as a litmus test for the health of their ecosystems. To preserve a species such as the Everglade Kite or Spotted Owl is to ensure the survival of many other creatures. Ornithologists Noel and Helen Snyder have spent nearly fifty years studying and photographing birds of prey in their natural habitat. The result of decades of firsthand field studies combined with key biological and conservation studies by other experts, *Raptors of North America* presents a comprehensive and captivating account of our continent's birds of prey. Readers will meet the nocturnal raptors, the owls, and the diurnal raptors: hawks, harriers, kites, falcons, eagles, ospreys, vultures, and condors. This book was an editor's choice of the Scientific American Book Club.

Peregrine Spring, Nancy Cowan's memoir of her thirty years living intimately with raptors, gives us a new perspective on the relationship between humans and the natural world. Cowan shares her experiences running a world-famous falconry school, and the lessons she's learned from her birds. From retrieving her falcon from the local police "lock up," to finding her husband in bed with a gyrfalcon, to a heart-breaking race to save her young peregrine from attack by a wild hawk, Cowan's life is a constant, ever-changing adventure. Cowan's birds have immersed her so much into their world that she has found herself courted by a Goshawk and bossed about by a Harris' Hawk. The book carries her readers along, so they, too, meet hawks and falcons in ways they never imagined possible.

"Raptors of Western North America"--together with its companion volume, "Raptors of Eastern North America"--are the best and most thorough guides to North American hawks, eagles, and other raptors ever published. Abundantly illustrated with hundreds of full-color high-quality photographs, they are essential books for anyone seeking to identify these notoriously tricky-to-identify birds. "The Wheeler Guides" will help birders and biologists navigate the pitfalls of raptor identification, including raptors' often extreme variation by age and sex as well as the existence of numerous "confusion" species. The plumage section discusses more plumage variations--and in greater consistency, depth, and clarity--than any previously published guide. The text--informed by years of study and consultation with local, state, provincial, and regional experts--covers all aspects of raptor biology in an easy-to-read and consistent format. It provides the most up-to-date information available on status and distribution, taking into account the recent alteration of some species' ranges due to pesticide bans and introduction programs. The range maps--which include "city" plotting--are the most accurate and largest ever produced for North American raptors.

This book shows us why.

"Keith L. Bildstein has studied migrating raptors on four continents and directs the conservation science program at Hawk Mountain Sanctuary, Pennsylvania, the world's first refuge for migratory birds of prey. In this book, he details the stories and successes of twelve of the world's most important raptor-viewing spots, among them Cape May Point, New Jersey; Veracruz, Mexico; Kekoldi, Costa Rica; the Strait of Gibraltar, Spain; and Elat, Israel."--BOOK JACKET.
