Online Library Sensation Perception And Action An Action-An Evolutionary Perspective

Sensation and perception are two separate processes that are very closely related.

Sensation is input about the physical world obtained by our sensory receptors, and perception is the process by which the brain selects, organizes, and interprets these sensations. In other words, senses are the physiological basis of perception.

Perception-in-action. From
Gibson's early work derived
an ecological understanding
of perception known as
perception-in-action, which
argues that perception is a
requisite property of
animate action. It posits

~~Action: An Evolutionary Perspective...~~

The line of difference
between sensation and
perception is now drawn;

perception follows
sensation. In the brain, the
nerve impulses go through a
series of organization,
translation and
interpretation. Once
perception is finished, a
person is able to "make
sense" out of the
sensations. For instance,
seeing the light (sensation)
is different ...
