State Trait Anxiety Inventory

The STAI, or State-Trait Anxiety Inventory (STAI) is an instrument that quantifies adult anxiety (a children's version is also available). This particular instrument is used to simplify the separation between state anxiety and trait anxiety, feelings of anxiety and depression.

~~State Trait Anxiety Inventory (STAI)~~

The state-trait anxiety inventory or STAI is a widely accepted measure of trait and state anxiety elaborated by Spielberger and collaborators in 1983. It is used in clinical settings for the diagnosis of anxiety and to differentiate it from depressive syndromes. It is also used by researchers as an indicator of caregiver distress (APA).

Description of Measure: The State-Trait Anxiety Inventory (STAI) is a commonly used measure of trait and state anxiety (Spielberger, Gorsuch, Lushene, Vagg, & Jacobs, 1983). It can be used in clinical settings to diagnose anxiety and to distinguish it from depressive syndromes. It also is often used in research as an indicator of caregiver distress (e.g., Greene et al., 2017, Ugalde et al., 2014).

~~The State Trait Anxiety Inventory (STAI)~~

The State-Trait Anxiety Inventory for Adults (STAI-AD) is the definitive instrument for measuring anxiety in adults. It clearly differentiates between the temporary condition of "state anxiety" and the more general and long-standing quality of "trait anxiety." It helps professionals distinguish between a client's feelings of anxiety and depression.

Spielberger, Charles D. Charles Donald Spielberger, Ph.D., (1927 - 2013) was a clinical/community psychologist well known for his work on personality and health, and his development of the State-Trait Anxiety Inventory (STAI).

~~Manual: State Trait Anxiety Inventory for Adults~~

The State-Trait Anxiety Inventory is a psychological inventory based on a 4-point Likert scale and consists of 40 questions on a self-report basis. The STAI measures two types of anxiety - state anxiety, or anxiety about an event, and trait anxiety, or anxiety level as a personal characteristic. Higher scores are positively correlated with higher levels of anxiety. Its most current revision is Form Y and it is offered in 40 languages. It was developed by psychologists Charles Spielberger ...
