This innovative book is the first on environmental issues aimed at management students and practitioners. Its purpose is to help managers make strategic decisions that are both economically successful and sensitive to the Earth's natural environment. The book is designed to: educate managers about current national and global environmental issues, particularly as they relate to economic activities; introduce a range of social, scientific, psychological and economic concepts related to environmentally sensitive strategic decisions; and offer a new strategic decision-making framework to help achieve long-term economic success within the limits of the ecosystem.

All organizations operate in an environment that is rapidly changing. To be successful, the organization must also change. The question is what to change and how. This book will describe in some detail a number of management programs, many of which are known by their three-letter acronyms, such as Just-in-Time (JIT) or Service-Oriented Architecture (SOA). A management program is designed to improve an organization ' s effectiveness and efficiency. However, there are so many management programs it is often difficult for managers to decide which one would be most appropriate for their operation. This book will describe an array of management programs and group them to indicate their primary purpose. The book will also outline a process that will enable managers to select the most appropriate management program to meet their immediate and long-term needs. Implementing a management program is no small task. It can be expensive, time-consuming, and disruptive of normal operations; therefore, the choice of the management program requires careful selection and implementation. Care must be taken to increase the likelihood of successfully implementing new ventures in all types of organizations – business, nonprofit and governmental agencies. Many ventures fail, or achieve limited success, not because the idea isn ' t good but because the organization has not adequately prepared its internal capabilities to meet the environmental conditions in which it operates. An important feature of this book is that it can be updated periodically to add new programs

and phase out programs no longer relevant. The book will provide readers with a comprehensive description of the most popular management improvement programs and their primary applications to their organizations. We will discuss the philosophy and principles of these programs and include a discussion on how to use each program to achieve optimum success. A central theme of this book is to not just adopt an improvement program for the sake of adopting it, but to match the improvement program with the specific needs in an organization. In the chapters that follow, we will illustrate how this matching process can be conducted. Above all, we plan the book to be a concise and useful resource to both practitioners and academics. Here is what you can expect in the chapters.

Organizational success crucially depends on having a superior strategy and effectively implementing it. Companies that outperform their rivals typically have a better grasp of what customers value, who their competitors are, and how they can create an enduring competitive advantage. Successful strategies reflect a solid grasp of relevant forces in the external and competitive environment, a clear strategic intent, and a deep understanding of a company's core competencies and assets. Generic strategies rarely propel a firm to a leadership position. Knowing where to go and finding carefully considered, creative ways of getting there are the hallmarks of successful strategy.

With a full explanation on the basic principles of marketing, this guidebook helps readers answer such questions as What is marketing? What is a marketing forecast? and What is the best way to conduct market research? Written by professionals for students and entrepreneurs, this text also features international case studies, numerous up-to-date examples of the latest developments and trends in marketing, and tried and tested information that helps students learn.

These chapters on 'Responsible Leadership' represent the latest thinking on a topic of increasing relevance in a connected world. There are many challenges that still remain when it comes to establishing responsible leadership both in theory and practice. Whilst offering conceptualisations for the improvement of leadership is a first and perhaps easier response, what is more difficult is to facilitate the actual change to happen. These chapters will not only generate interest in the emerging domain of studies on responsible leadership, but also will pave the way for future research in this area in the years to come.
