As the field of bioethics has matured, increasing attention is being paid to how bioethical issues are treated in different moral and religious traditions and in different parts of the world. It is often difficult, however, to get accurate information about these matters. The Bioethics Yearbook Series provides interested parties with analyses of how such issues as new reproductive techniques, abortion, maternal-fetal conflicts, care of seriously ill newborns, consent, confidentiality, equitable access, cost-containment, withdrawing treatment, active euthanasia, the definition of death, and organ transplantation are being discussed in these different traditions and different parts of the world. The first volume, and every second succeeding volume, will discuss developments in the Anglican, Baptist, Buddhist, Catholic, Eastern Orthodox, Hindu, Jewish, LDS, Lutheran, Methodist, Muslim, and Presbyterian Traditions. The second volume, and every second volume succeeding it, will discuss official governmental and medical society policies on these topics throughout the world.

This book is a comprehensive guide to the assessment and management of high risk pregnancy. Divided into eleven sections, the text begins with discussion on antenatal care, nutrition, genetic screening and ultrasonography-guided interventions in pregnancy. The following sections cover different factors that cause a pregnancy to be high risk including haematological disorders, early pregnancy complications, medical disorders such as gestational diabetes and cardiac disease, obstetric complications such as eclampsia and preterm labour, infections, foetal growth problems, and autoimmune diseases. The finals chapters discuss delivery complications and miscellaneous topics such as intrauterine foetal death, cerebrovascular accidents, ART pregnancies, and medicolegal aspects. The book is further enhanced by clinical photographs, diagrams and tables. Key points Comprehensive guide to management of high risk pregnancy Detailed discussion on screening and prevention of complications Presents recent advances in the field Highly illustrated with clinical photographs, diagrams and tables

Edited, authored, and reviewed by an expert team of oncologists and nuclear physicians/radiologists, this one-of-a-kind title helps you make the most of the critical role PET/CT plays in cancer staging and therapeutic responses to individualized treatments. Drs. Mohsen Beheshti, Werner Langsteger, and Alireza Rezaee place an emphasis on cutting-edge research and evidence-based practice, ensuring that you ' re up to date with every aspect of this fast-changing field. For each tumor entity, you ' ll find authoritative discussions of background, pathology, common pattern of spread, TNM classification, clinical guidelines, discussion, evidence-based recommendations, key points, and pitfalls. Contains 130 teaching cases with high-quality PET/CT images. Presents clear, practical guidance from multiple experts across subspecialties: nuclear medicine, oncology, oncologic surgery, radiation oncology, and clinical research. Includes separate, comprehensive chapters on head and neck, lung, breast, esophageal/gastric, pancreas/neuroendocrine, colorectal, hepatobiliary, lymphoma, gynecologic, prostate, melanoma, and brain cancers. Features short reviews of clinical aspects of different cancers, primary diagnostic procedures, and recommendations regarding PET/CT from ESMO and NCCN. Helps to reveal positive outcomes or potential deficits or weaknesses in an individual plan of care, allowing for better outcomes in patient care, future cancer research, and application of radiotracers beyond 18F-FDG.

"This is the first comprehensive work on Eastern Orthodoxy in the context of health and modern medicine. The book, like the others in the series, has two purposes. One purpose is to help health care professionals (who themselves come from various religious traditions, or perhaps none) to understand how the Orthodox Christian faith is related to issues of health and medicine so that they can serve their Orthodox patients with greater sensitivity. The book is also written to help Orthodox people understand more fully the relation of their tradition to the issues of health and medicine, as well as for those with a general interest in this formative tradition. Of particular note is the emphasis here on the continuously maintained tradition and practice of spiritual healing in the Orthodox church. Whether through the healings of the saints or through the liturgical tradition of concern for the sick, especially in the sacrament of healing itself, holy unction, Orthodox Christianity attends to the concrete and interrelated reality of human illness in its spiritual, psychological, and physical dimensions."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. This volume will be a collection of chapters from authors with wide experience in their research field. The purpose is to produce a coherent book that reflects the common theme of theory in medical thinking and multidisciplinary research practice. In this context "theory" relates to frameworks of concepts, facts, models etc that help to inform practitioners (clinicians, scientists and engineers) both within their own fields and as they seek to share dialogue with colleagues with other fields. The book will therefore be integrative across a broad spectrum of fields within medicine. To achieve this the chapters will be associated with others in a number of meaningful ways. Each chapter will share a number of points of contact that will include at least two of the following: "similar biomedical area (e.g., immunity, neuroscience, endocrinology, pathology, oncology, haematology, à €!) "similar multidisciplinary theoretical contexts (e.g., modelling, analysis, description, visualization, complex systems, à €!) "similar multidisciplinary medical issues and questions (e.g., clinical practice, decision making, informatics, à €!) à € €Uniquely explores role of interdisciplinary exchange in the development and expansion of medical theory à € €Timely and insightful essays on the growth and development of medical theories from some of the world's top clinicians and medical researchers, including Werner Arber, Frank Vertosick, and David Weatherall à € €Assembles diverse perspectives on medicine and physiology from biology, statistics, ethics, computer science, philosophy, history à € €Uniquely illuminates the social and historical processes through which theoretical research translates into clinical practice à € €Reveals the growing role of technology, especially computational modelling, in changing the nature of Western medicine
