## Problem Of The Month

**Solution**  
create right triangles by drawing extra lines. For example, divide an isosceles triangle into two congruent right triangles.  
Step 6: Decide whether you will need the Pythagorean theorem, sine, cosine or tangent. Step 7: Check that your answer is reasonable. The hypotenuse is the longest side in a right triangle.

## Problem Of The Month

~~Khan Academy~~

In discrete geometry and discrepancy theory, the Heilbronn triangle problem is a problem of placing points within a region in the plane, in order to avoid triangles of small area. It is named after Hans Heilbronn, who conjectured prior to 1950 that this smallest triangle area is

# Read Book Tri Triangles Problem Of The Month

~~Solution~~ necessarily at most inversely proportional to the square of the number of points. Heilbronn's conjecture was proven false, but the asymptotic growth rate of the minimum triangle area remains unknown.

# Read Book Tri Triangles

## Problem Of The Month

**Solution**  
This formula is for right triangles only!  
The sides,  $a$  and  $b$ , of a right triangle are called the legs, and the side that is opposite to the right (90 degree) angle,  $c$ , is called the hypotenuse. This formula will help you find the length of either  $a$ ,  $b$  or  $c$ , if you are given the lengths of the other two.
